SINCO®

As the world seems to be turning faster every year and we face countless improvements and fascinating innovations in technology at the speed of light, efficiency and speed have become more important than ever. We believe that time is money, so efficiency, flexibility, and speed have become the core of the SINCO® brand. The introduction of our unique and patented

MultiZero® Clamping System has changed the perception of zero-point clamping systems on the market and made the usage incomparably more simpler, faster, and flexible. We're constantly focused on creating simple and innovative clamping solutions in the field of metal processing. Powered by 40 years of industry experience we believe we have the perfect know-how to ca-

ter to your company's needs — and with every user and market in mind we can treat each company individually at the highest level possible. SINCO® provides solutions that are based on real-time industry problems in the field of high-productive clamping, be it a high-series production facility or small production lines in period where saying "time is money" is more important than ever.

Multizero® Plate Series 3000

Series 3000 Overview

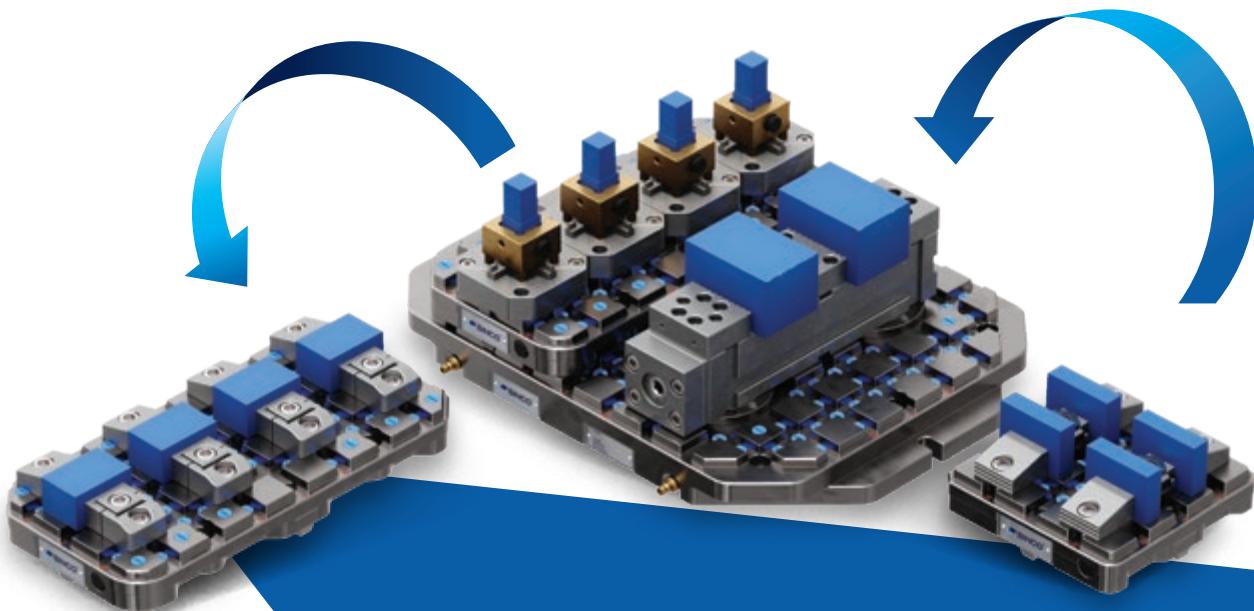

The MultiZero® Plate 3000 family is designed to cover three axis machine tables with sizes AxB but also cover other machines on the market. With a great selection of base plates, pallets and fixtures, the MultiZero® System is made

to be more than flexible to dominate in serial production as well as in low volume production and cover clamping of complex workpieces at the same time. The MultiZero® System is designed to be very simple and easy to use.

With zero-point pneumatic modules for automatic clamping and RFID identification and a data chip optionally installed on each pallet, the system is designed to fully fit automated machine environments and support Industry 4.0.

MultiZero® Plate Series 3000 Advantages

- Used for clamping pallets, workpieces, vises and fixtures directly
- Zero point at every cross section of centering slots
- Zero points in array of 50 x 50 mm at type P50 and array of 100 x 100 mm at type P100
- Clamping thread holes M12 in array of 25 x 25 mm
- Great flexibility and machine table usage due to large number of zero points
- One step positioning and clamping at every zero point
- High repeatability and system accuracy with every clamping
- High retention forces and highest allowed lateral forces at every zero point
- Unique system for compensation of vibrations and thermal expansions
- System provides automatic clamping with pneumatic modules and the best compensation for the lateral forces on the market
- Great for clamping complex asymmetrical parts in single-part production
- Clamping system capable of quickly adjusting to various needs
- Great modularity with large selection of various types and sizes of pallets, fixtures and vises
- Compatible with classic tightening methods and clamping elements

Positioning and clamping of the workpieces onto the pallet is done off the machine, while having simultaneous operation on the machine. This leads to higher productivity and makes the system very suitable for serial and low volume production. Multiple pallets, fixtures or workpieces can be clamped numerous times with high repeating in positioning, maintaining the zero-point position accuracy to 5µm.

Pallets and fixtures are automatically self-centered and oriented in all axes as they are put onto the MultiZero® Plate or MultiZero® Pneumatic Plate and Pallet. This is achieved by four aligning members embedded onto every pallet type from the MultiZero® Pallet family. Aligning members correspond to the tapered slots and are oriented and precisely positioned on the MultiZero® Clamping System. Pallets are clamped directly onto the base plate manually with clamping bolts (M12), or automatically with retractable nipples to the MultiZero® Pneumatic Plates. The system ensures the possibility to clamp and orient the pallet at the same time and through simultaneous use of clamping modules and tapered slots, the best possible precision and high rigidity for automatic clamping on the market.

Clamping with bolts or with pneumatic modules accommodates the Z axis, where the other two axes are accommodated by aligning the members. The system has high rigidity and is capable of withstanding high machining forces. Even with high loads, there are less vibrations and no danger of workpiece movement during machining.

Constant repeatable manual
or automatic clamping in
accuracy of 5µm.

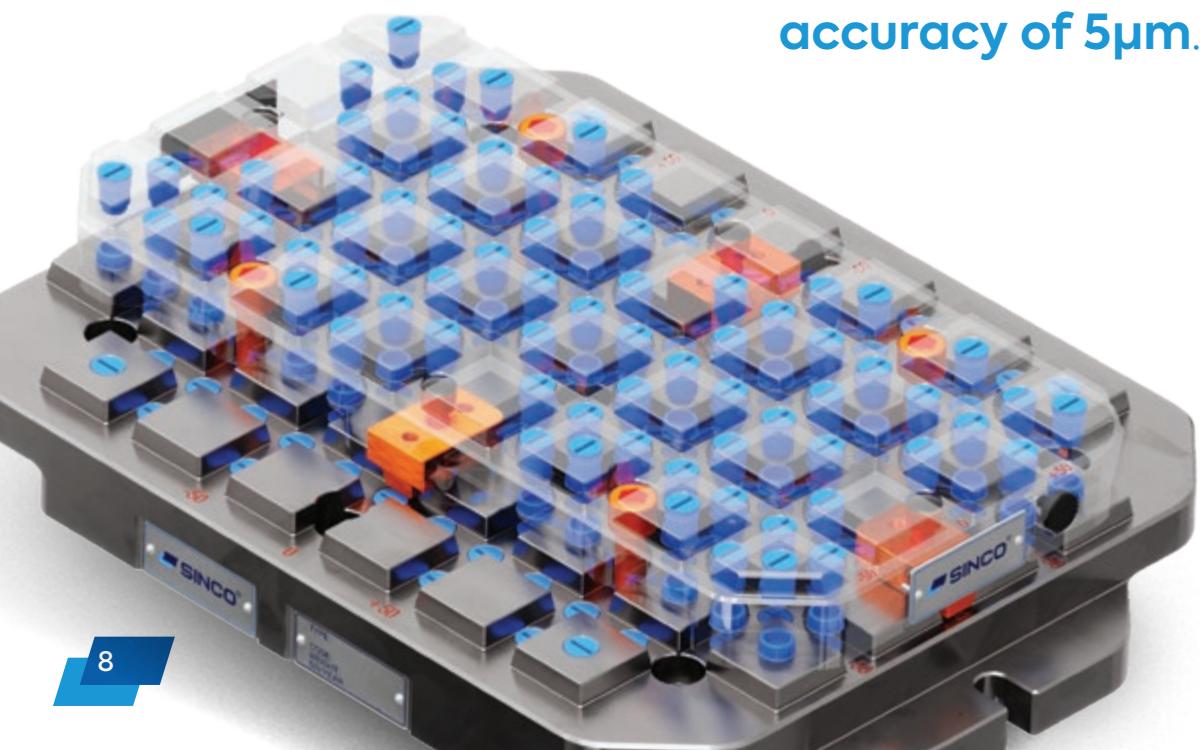

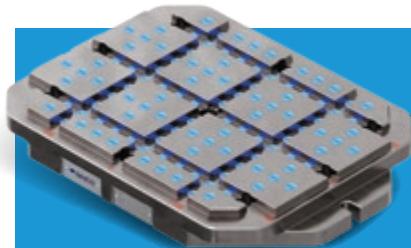

Plate types

MultiZero® Plate P50

- Used for zero-point clamping of pallets, workpieces, vises and clamping fixtures
- Slot pitch 50 mm
- Zero point array 50 x 50

MultiZero® Plate P100

- Used for zero-point clamping of pallets, workpieces, vises and clamping fixtures
- Slot pitch 100 mm
- Zero point array 100 x 100

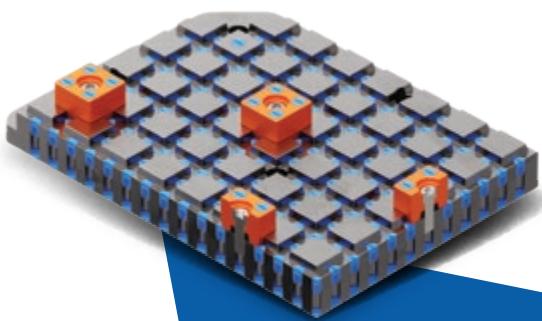

MultiZero® Pneumatic Plate

- Used for automatic clamping of pallets, workpieces, vises and fixtures
- Supports standard manual clamping of pallets, workpieces, vises and fixtures
- Slot pitch 50 mm
- Zero point array 50 x 50
- Pneumatic zero-point array 200 x 200

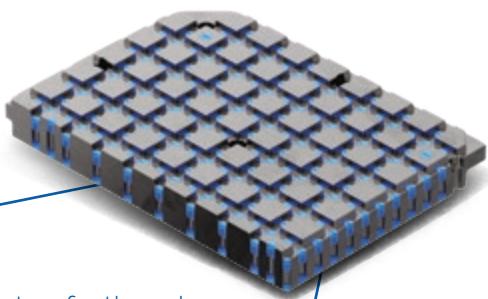

Size in mm	MultiZero® P50	MultiZero® P100	MultiZero® Pneumatic
320 x 400			 1B1-3320-0 1B1-3321-0
400 x 500			 1B1-3420-0 1B1-3421-0
500 x 630			 1B1-3520-0 1B1-3521-0
630 x 800			 1B1-3632-0 1B1-3633-0
630 x 1000			 1B1-3652-0 1B1-3653-0
630 x 1200			
630 x 1400			

Plate features

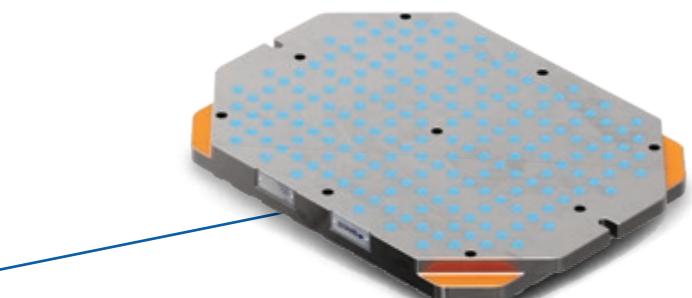

- MultiZero® point at every cross section of conical slots
- Security gap – centering elements don't touch the slot bottom

- Plastic protectors for thread holes (supplied)

- Precise pallet sides used for centering

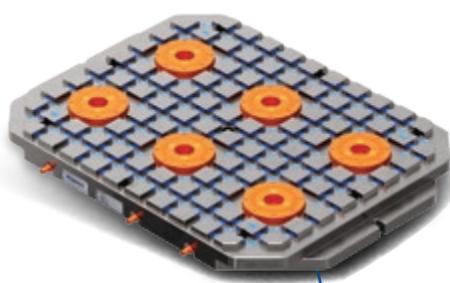

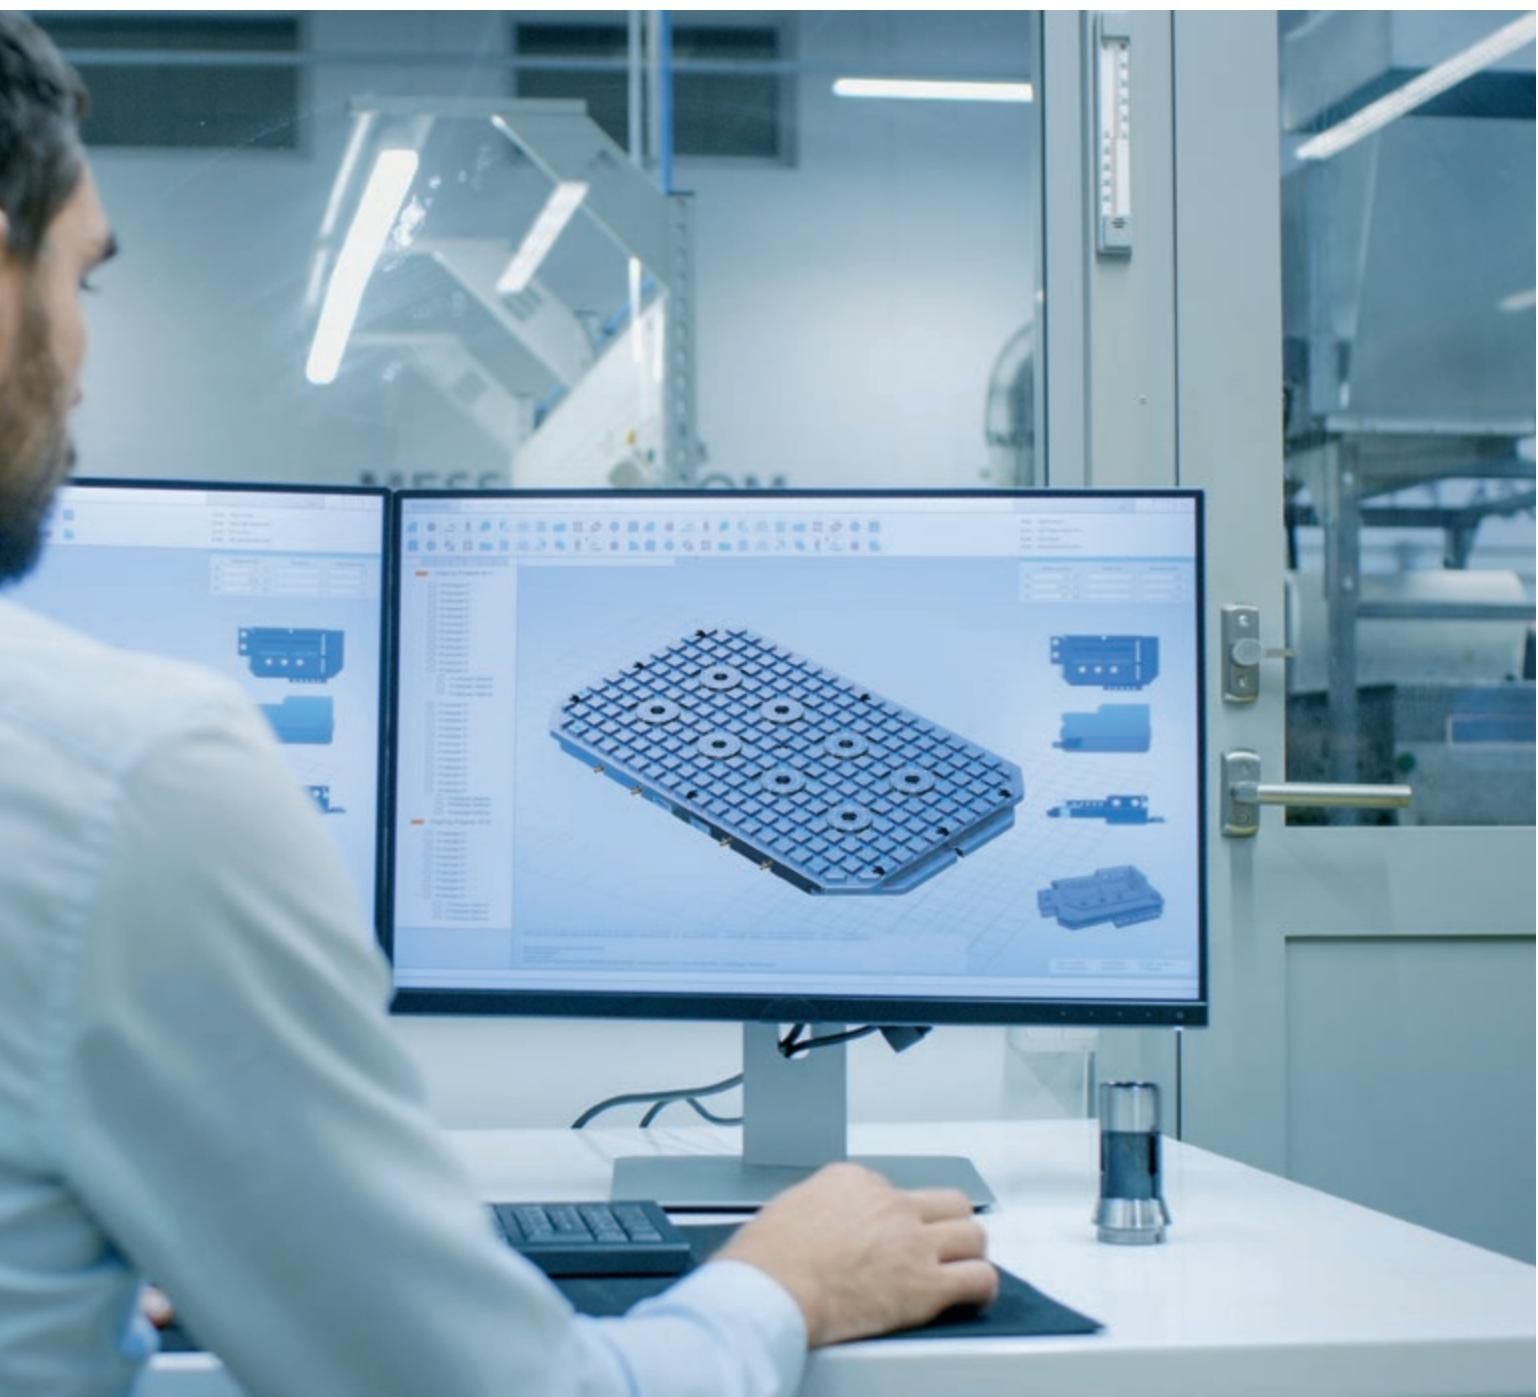

- Handling grooves on the underside

www.sinco.eu

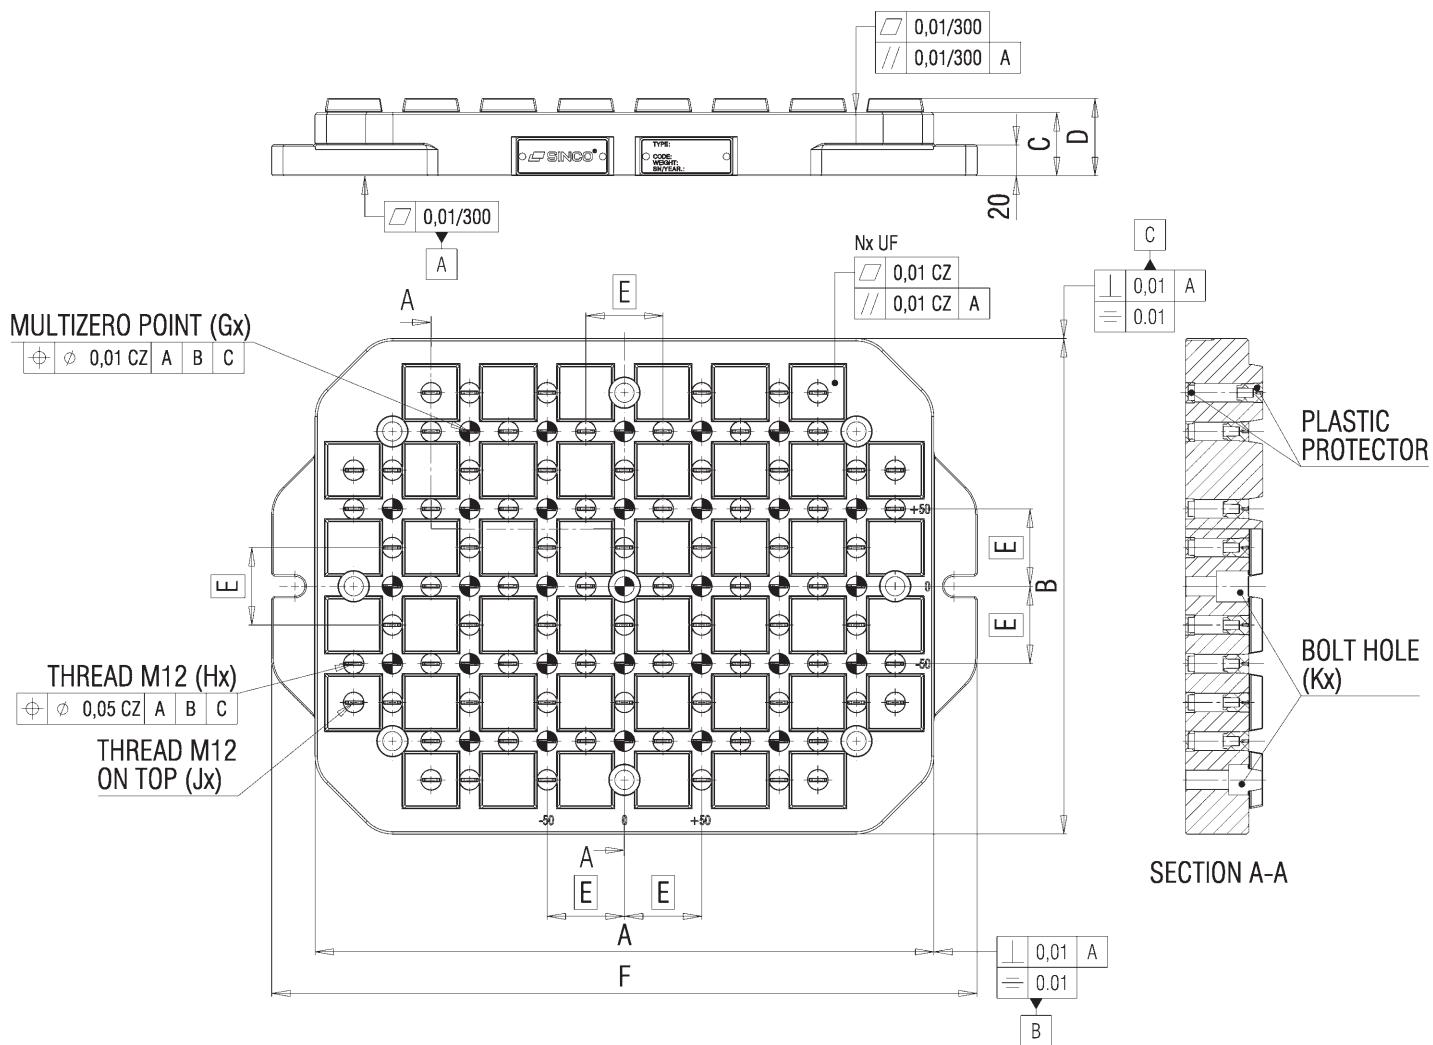

- M12 thread holes for lifting eyebolts

- Pneumatic zero-point modules
 - Available on MultiZero® Pneumatic Plate and MultiZero® Pneumatic Pallet
 - Enables fully automated production
- Technical data:
Retention force (per each pneumatic module): 55 kN | Air pressure: min. 5 bar, max. 10 bar | Operating temperature: +10 to +80°C | Min. release time 0.2 seconds

MultiZero® Plate 3630 630x800 with various classic clamping elements

MultZero® Plate Series 5000

MultZero® Plate Series 5000

Series 5000 Overview

MultiZero® Plates family 5000 is designed to cover five axis machines with square table sizes (AxA). With great selection of base plates, pallets and fixtures, the MultiZero® system is

made to be flexible enough for serial production and cover clamping of complex workpieces at the same time. The MultiZero® System is designed to be very simple and easy to use. Easy

set-up, repeatability in clamping and set-up of the machine makes it ideal for all types of production from single-part production, low-volume to serial production.

MultiZero® Plate Series 5000 Advantages

- Used for clamping pallets, workpieces, vises and fixtures directly
- Zero point at every cross section of centering slots
- Zero points in array of 50x50 mm at type P50 and array of 100x100 mm at type P100
- Clamping thread holes M12 in array of 25x25 mm
- Great flexibility and machine table usage due to large number of zero points
- One step positioning and clamping at every zero point
- High repeatability and system accuracy with every clamping
- High retention forces (65kN) and highest allowed lateral forces at every zero point
- Unique system for compensation of vibrations and thermal expansions
- System provides automatic clamping with pneumatic modules and the best compensation for the lateral forces on the market
- Good for clamping complex asymmetrical parts for single-part production
- Clamping system capable of quickly adjusting to various needs
- Great modularity with large selection of various types and sizes of pallets, fixtures and vises
- Compatible with classic tightening methods and clamping elements

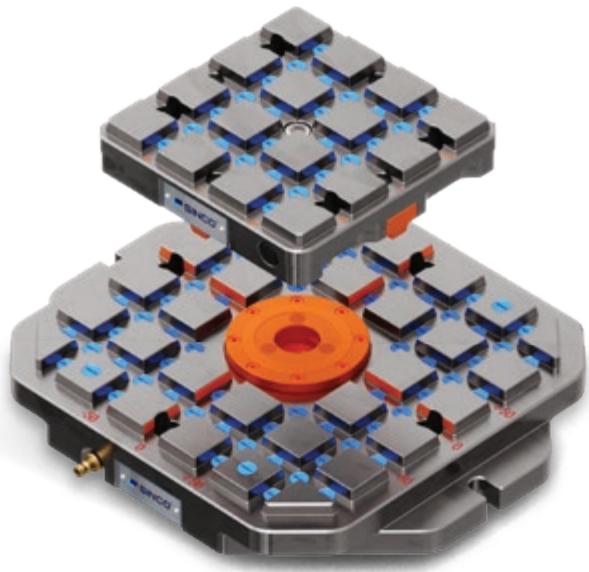

Positioning and clamping of the workpieces onto the pallet is done off the machine, having simultaneous operation on the machine. This leads to higher productivity and makes the system most suitable for serial and low volume production, even on classic machines. Multiple pallets, workpieces and fixtures can be clamped with high speed and simplicity, maintaining high repeatability and the positioning accuracy.

The system has high rigidity and is capable of withstanding high machining forces. It doesn't have the disadvan-

tages of known similar solution in relation to the forces and rigidity. Clamping with bolts or automatically with

pneumatic modules, accommodate the Z axis, where the other two axes are accommodated by aligning members.

MultiZero® System offers
up to 273 zero points
in one solution – most
on the market.

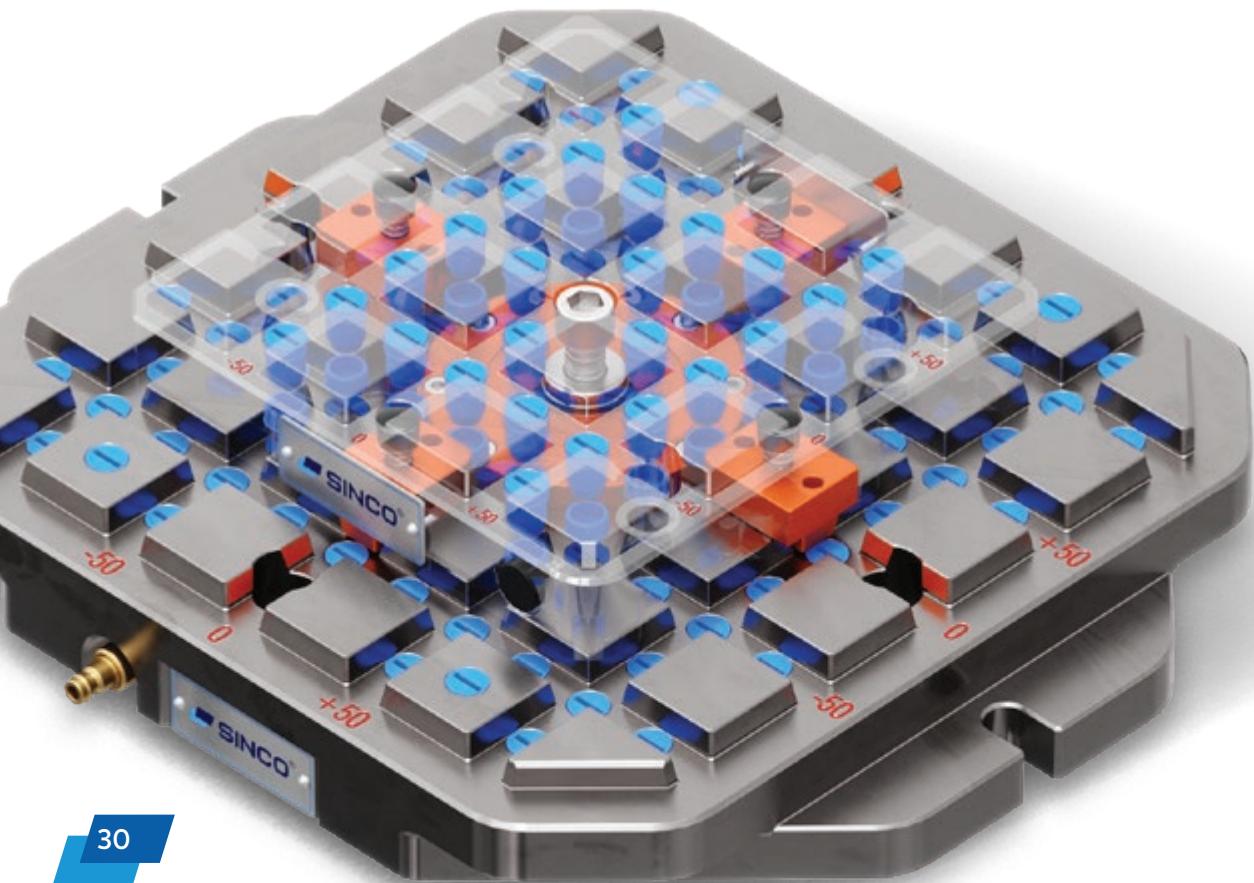

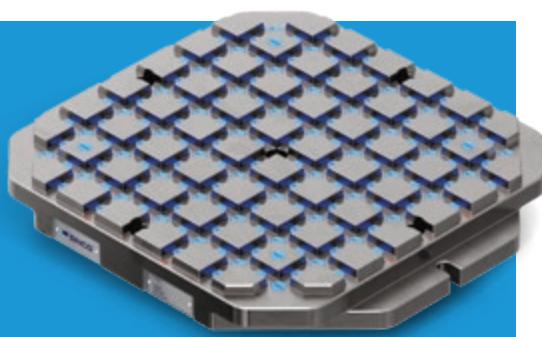

Plate types

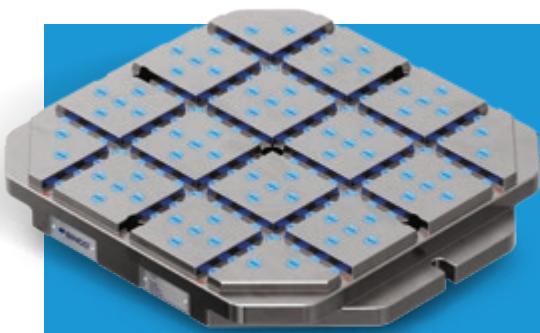

MultiZero® Plate P50

- Used for clamping pallets, workpieces, vises and clamping fixtures directly
- Slot pitch 50 mm
- Zero point array 50 x 50

MultiZero® Plate P100

- Used for clamping pallets, workpieces, vises and clamping fixtures directly
- Slot pitch 100 mm
- Zero point array 100 x 100

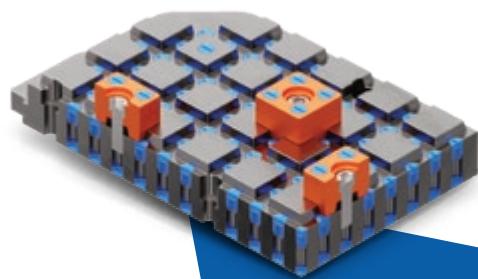

MultiZero® Pneumatic Plate

- Used for clamping pallets, workpieces, vises and fixtures automatically
- Supports standard manual clamping of pallets, workpieces, vises and fixtures
- Slot pitch 50 mm
- Zero point array 50 x 50
- Pneumatic zero-point array 200 x 200

MultiZero® Pneumatic Plate 5632 500x500 with three pallets

Multizero® Pallets

MultiZero® Pallets Overview

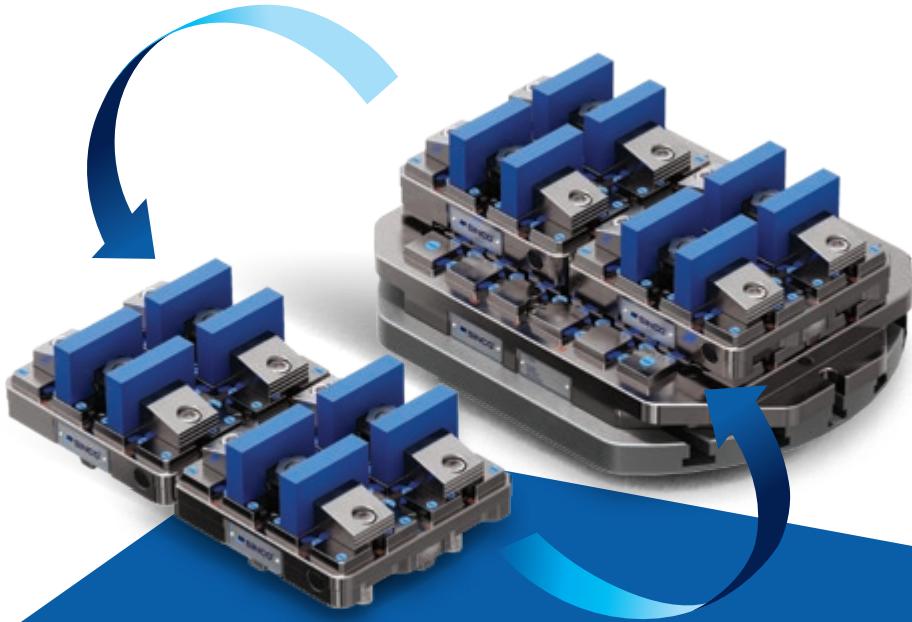

The MultiZero® Clamping System not only boasts two product groups of MultiZero® Plates, but also includes five pallet types with a great size selection, the results of which are seen in achieving the maximum processing pro-

ductivity. The Pallet System supports clamping on to the MultiZero® Plates manually or automatically with pneumatic modules. It is designed to be very simple and easy to use. Easy set-up and repeatability in clamping and

set-up of the machine makes it ideal for low-series, single-part production as well as serial production. The system is simultaneously extremely flexible and suitable for clamping complex workpieces.

The MultiZero® Clamping System offers up to 273 zero points in one solution, making it the market leader. The large number of zero points perform as one of the main benefits of the system and enable use in endless combinations of pallet layouts and allows maximum utilisation of the machine's working area. The high flexibility and quality of the processing with the MultiZero® Clamping System that contributes a large number of zero points, zero-point positioning, accuracy and repeatability, high retention forces, etc., changes the ratio in terms of the technological view of the zero-point clamping systems on the market.

With zero-point pneumatic modules for automatic clamping and RFID identification and a data chip optionally installed on each pallet, the system is **designed to fully fit automated machine environments and support Industry 4.0.**

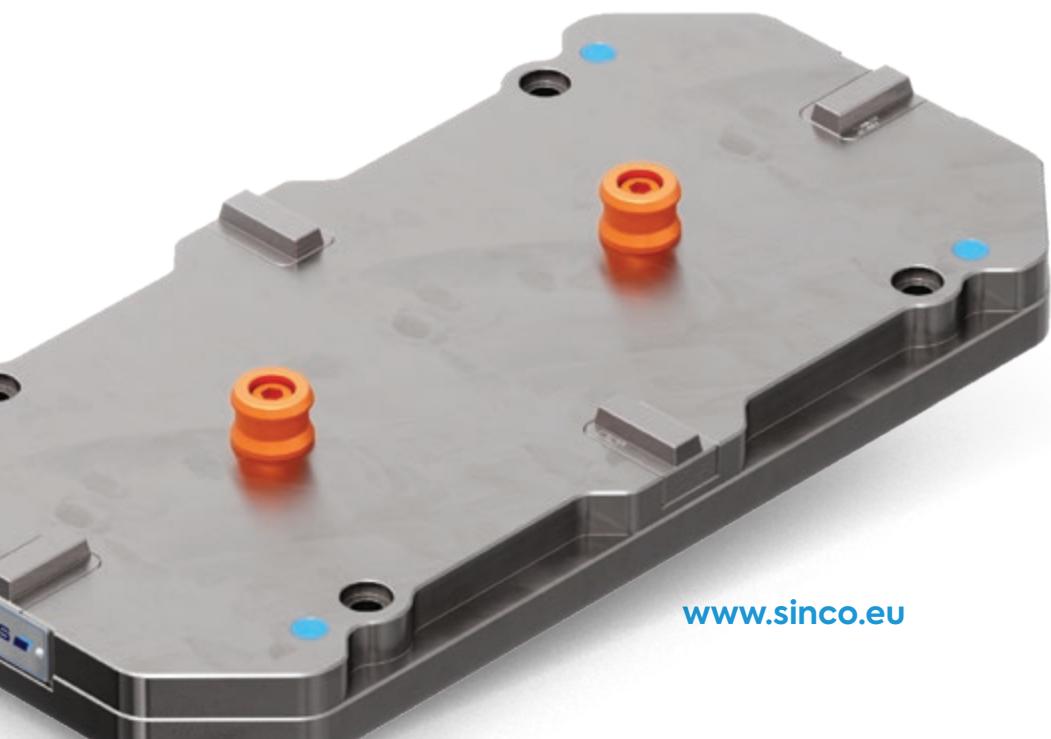

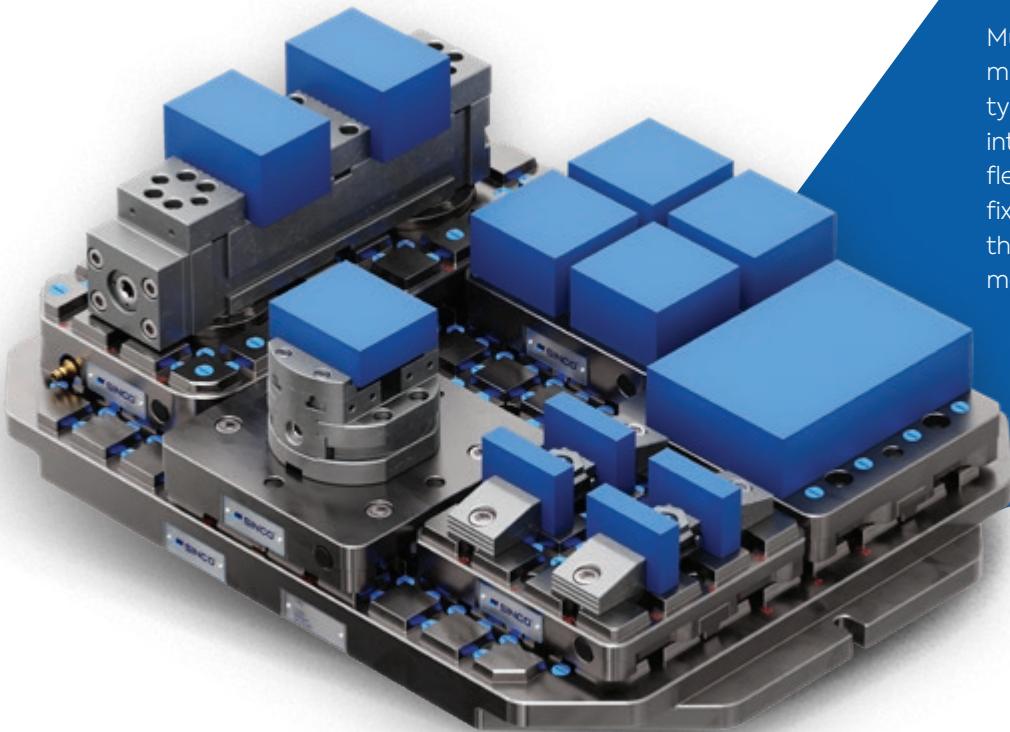

Positioning and clamping of the workpieces onto the pallet is done off the machine, while having simultaneous operation on the machine. This leads to higher productivity and makes the system very suitable for serial and low volume production. Multiple pallets, fixtures or workpieces can be clamped numerous times with high repeating in positioning, maintaining the zero-point position accuracy to 5µm.

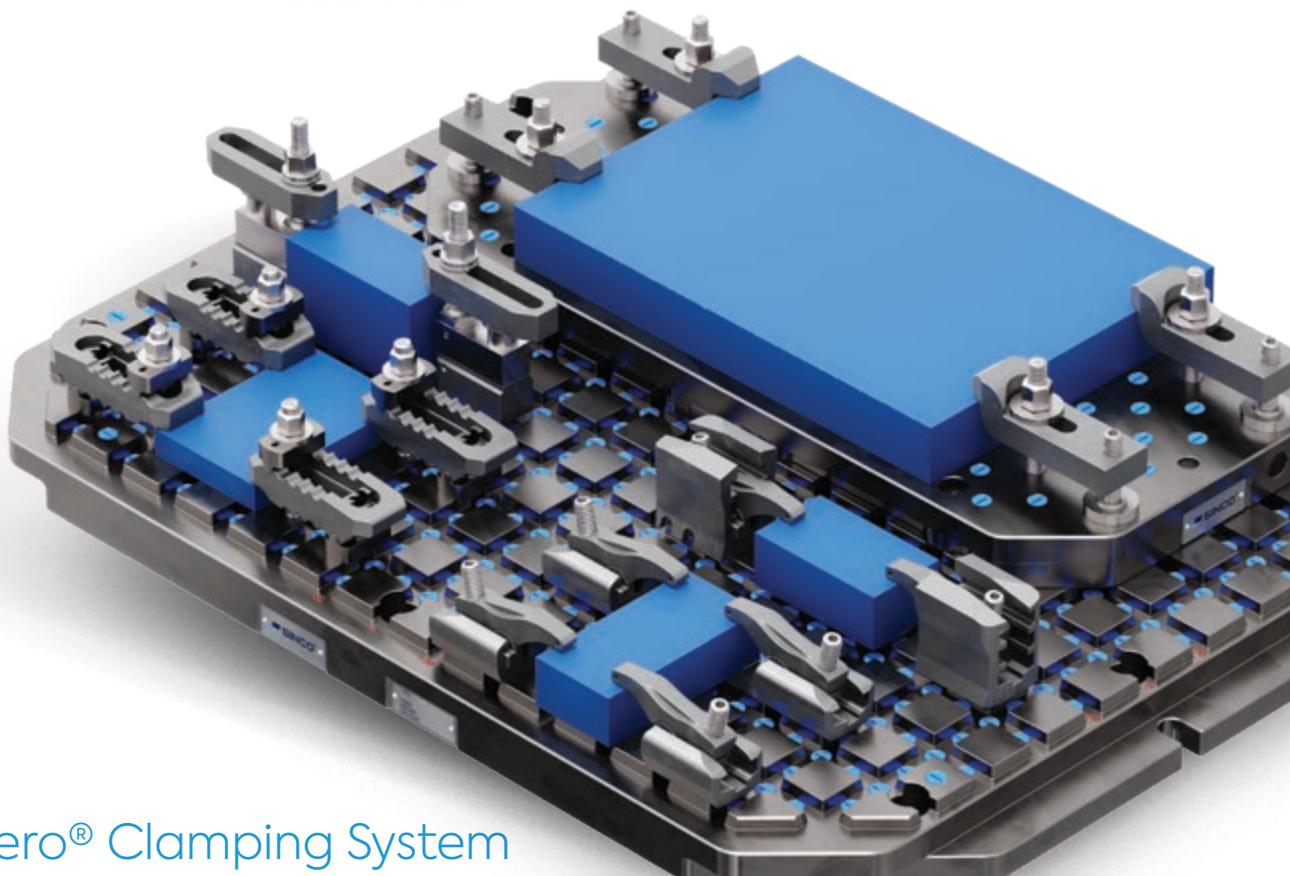

With automatic clamping, pneumatic modules on the MultiZero® Pneumatic Plate or MultiZero® Pneumatic Pallet clamps the certain other type of pallet with retractable nipples. At the same time four centering members enter conical slots of the MultiZero® System, providing for the centering, lateral forces and orientation of the clamped pallet. With this the MultiZero® System with pneumatic zero modules has incomparably better centering and greater compensation for lateral forces, compared to other automatic zero-point systems on the market.

**Every pallet has an option
for adding retractable
nipples from the underside,
making it fully compatible
and ready to clamp with the
MultiZero® Pneumatic Plate or
MultiZero® Pneumatic Pallet.**

MultiZero® Pallets of different dimensions and different function type are mutually interchangeable into endless combinations. These flexible arrangements of pallets or fixtures allow coverage of most of the available working surface, which maxes out the production capacity.

MultiZero® Clamping System
can **utilise commonly
available and used clamps,
vises and fixtures.**

Pallet types

MultiZero® Pallet

- Used for zero point clamping of pallets, workpieces, vises and fixtures

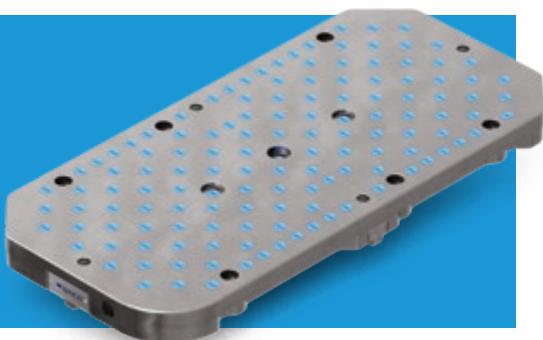

MultiZero® Pneumatic Pallet

- Used for automatic clamping of pallets, vises and fixtures

MultiZero® Clamp Pallet

- Used for clamping workpieces, vises and fixtures directly

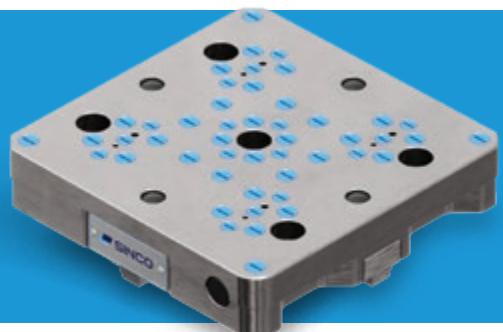

MultiZero® Blank Pallet

- Delivered blank
- Users can self-adjust the palette surface area to their processing needs
- On request produced according to customer's requirements

MultiZero® EDM Pallet

- Used for clamping single or multiple electrodes for sink erosion

* Order No. Pallet with mechanical clamping with bolts

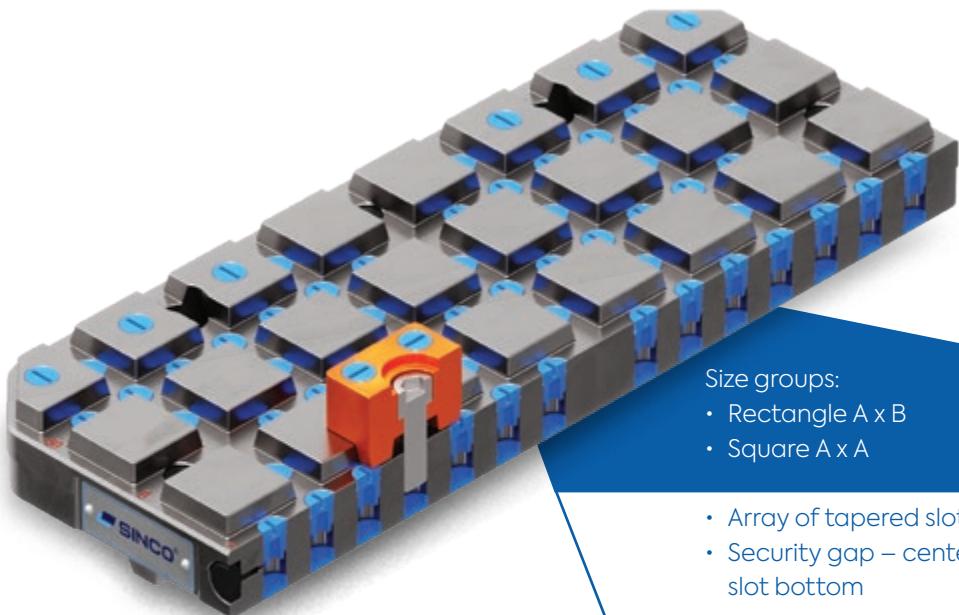

** Order No. Pallet with retractable nipples installed, used at pneumatic base plates

MultiZero® Pallet

Pallet features

- Used for zero point clamping of MultiZero® clamping devices, workpieces, fixtures and vises directly
- MultiZero® points in array of 50 x 50 mm
- Thread holes M12 in array of 25 x 25 mm
- Clamping repeatability <0.005 mm, at each MultiZero® point
- MultiZero® point at every cross section of pallet slots
- Two types of pallet clamping:
 - Clamped with M12 bolts to the MultiZero® Plate
 - Clamped with addition of retractable nipples onto the MultiZero® Pneumatic Plate
- Pallet can be lifted by supports centered through slots from the underside at each clamping bolt
- Limitless options and flexibility in clamping

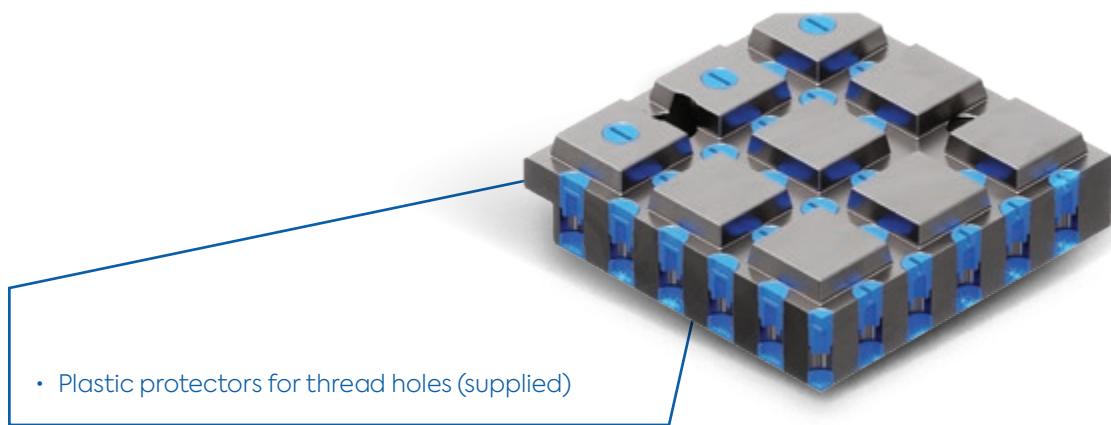

- Pallet material: corrosion-resistant steel
- RFID identification and data chip optionally installed on each pallet

Size groups:

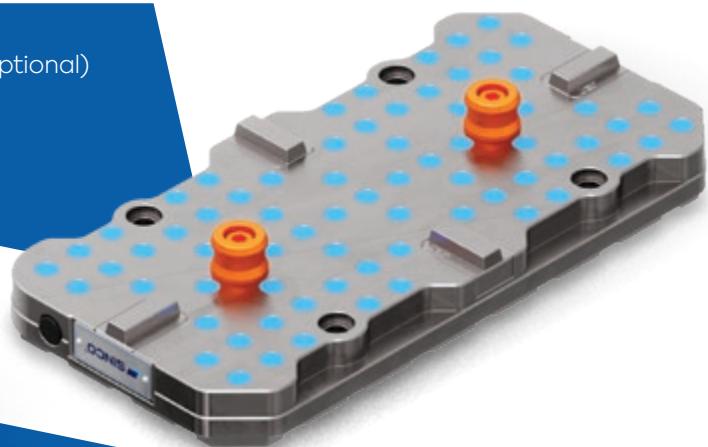

- Rectangle A x B
- Square A x A

- Array of tapered slots, pattern 50 x 50 mm
- Security gap – centering elements don't touch slot bottom

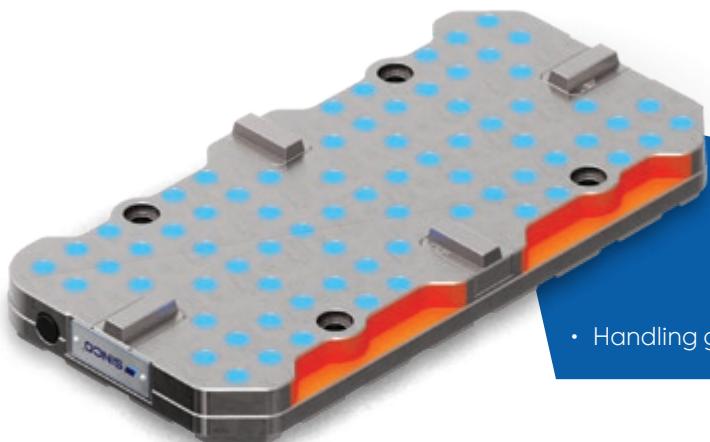

- Plastic protectors for thread holes (supplied)

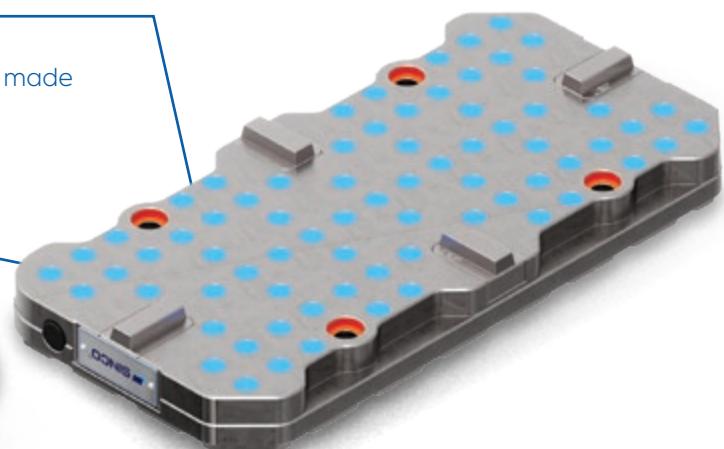

- Retractable nipples on the underside (optional)

- Handling grooves on the underside

- Positioning holes for clamping supports made underneath clamping bolts

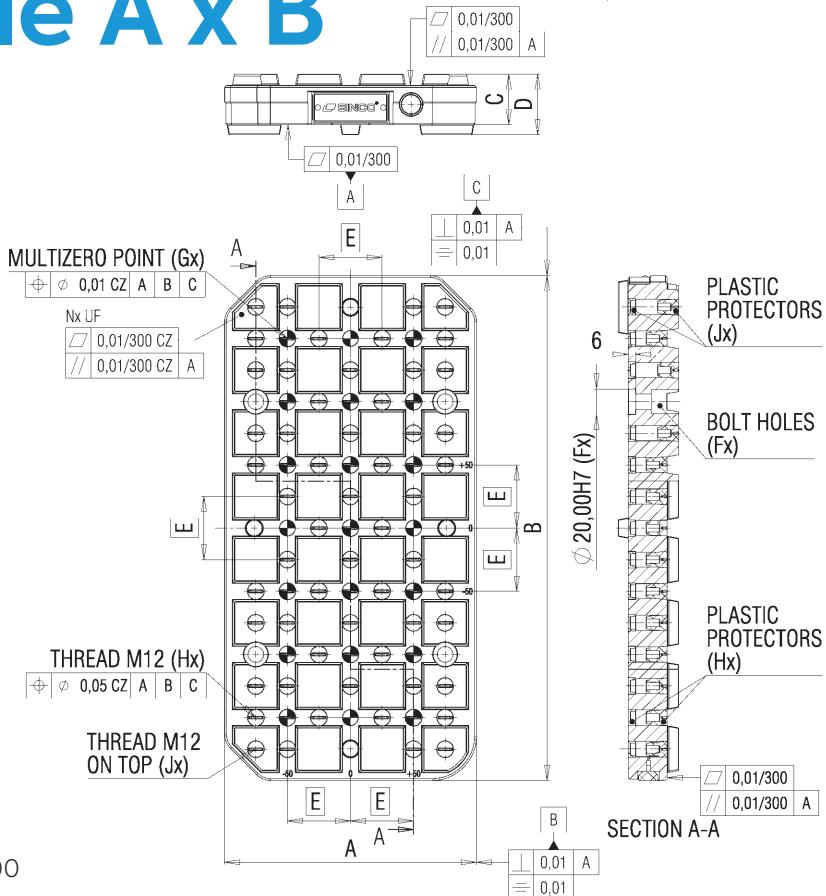

- M12 thread holes on the top used for lifting eyebolts and clamping

- RFID Identification and data chip installed optionally

MultiZero Pallet Rectangle A x B

MultiZero® Pallet Examples

MultiZero® Pallet 200 x 400 with workpieces clamped by MultiZero® Clamps

MultiZero® Pallet 150 x 400 with workpiece clamped with modular vise

MultiZero® Pallet 315 x 315 with workpiece lifted by MultiZero Supports

MultiZero® Pneumatic Pallet

Pallet features

- Used for automatic zero-point clamping of standard pallets equipped with retractable nipples, vises and other fixtures
- Includes MultiZero® points, slot pattern and pneumatic zero-point modules installed
- Designed to fit completely automated machine environments
- Clamping repeatability <0.005 mm, at each zero point
- Two types of pallet clamping:
 - Clamped with M12 bolts to the MultiZero® Plate
 - Clamped with addition of retractable nipples onto the MultiZero® Pneumatic Plate
- Pallet can be lifted by supports centered through slots from the underside at each clamping bolt

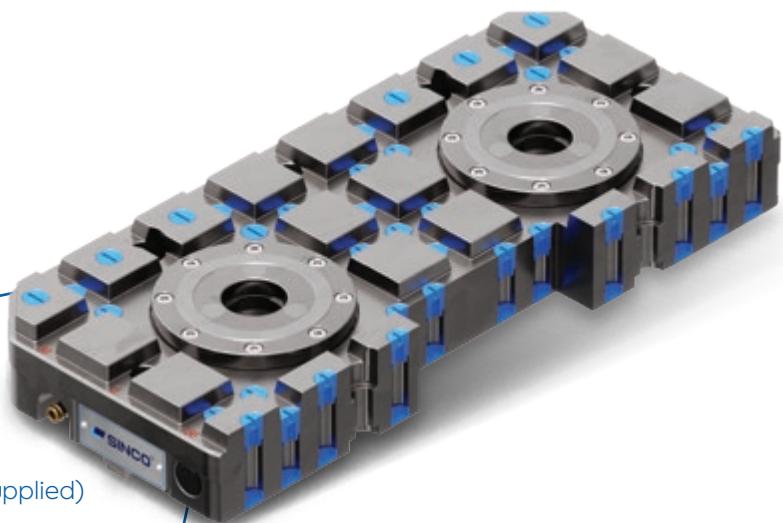

- Pallet material: corrosion-resistant steel
- RFID identification and data chip optionally installed on each pallet

Pneumatic module specification:

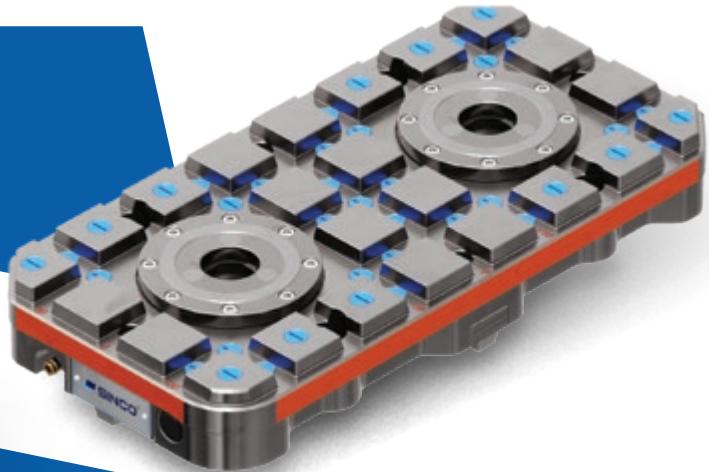

- Retention force of each module: 55kN
- Air Pressure: min. 5 bar, max. 10 bar
- Operating temperature: +10 to +80°C
- Min. release time 0.2 seconds

- Array of tapered slots, pattern 50 x 50 mm
- Pneumatic modules with zero points

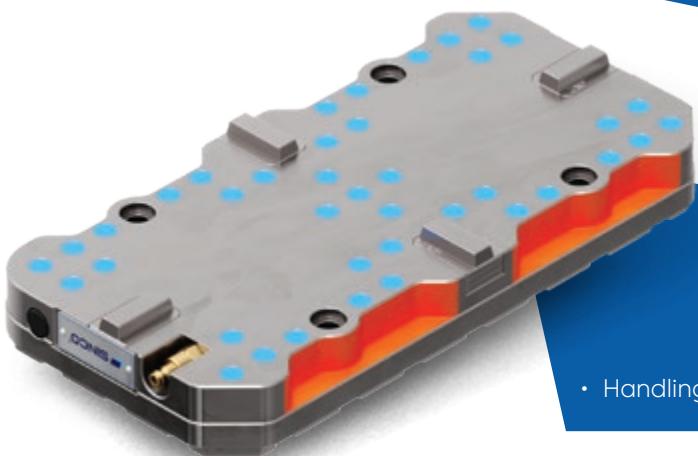

- Plastic protectors for thread holes (supplied)

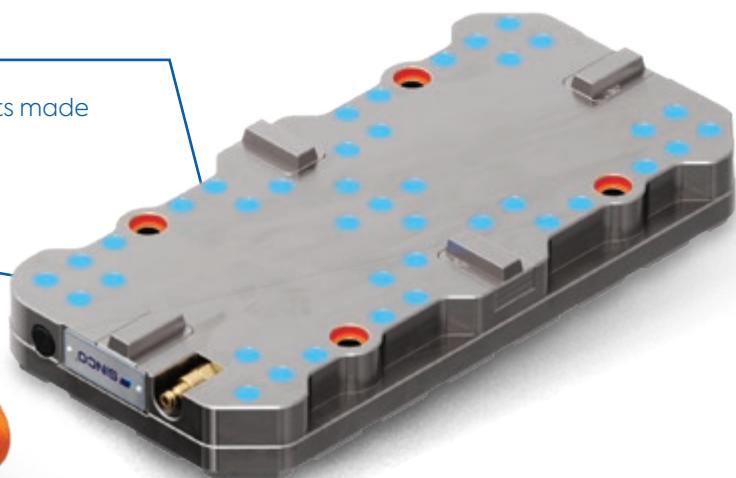

- Precise pallet sides used for centering

- Handling grooves on the underside

- Positioning holes for clamping supports made underneath clamping bolts

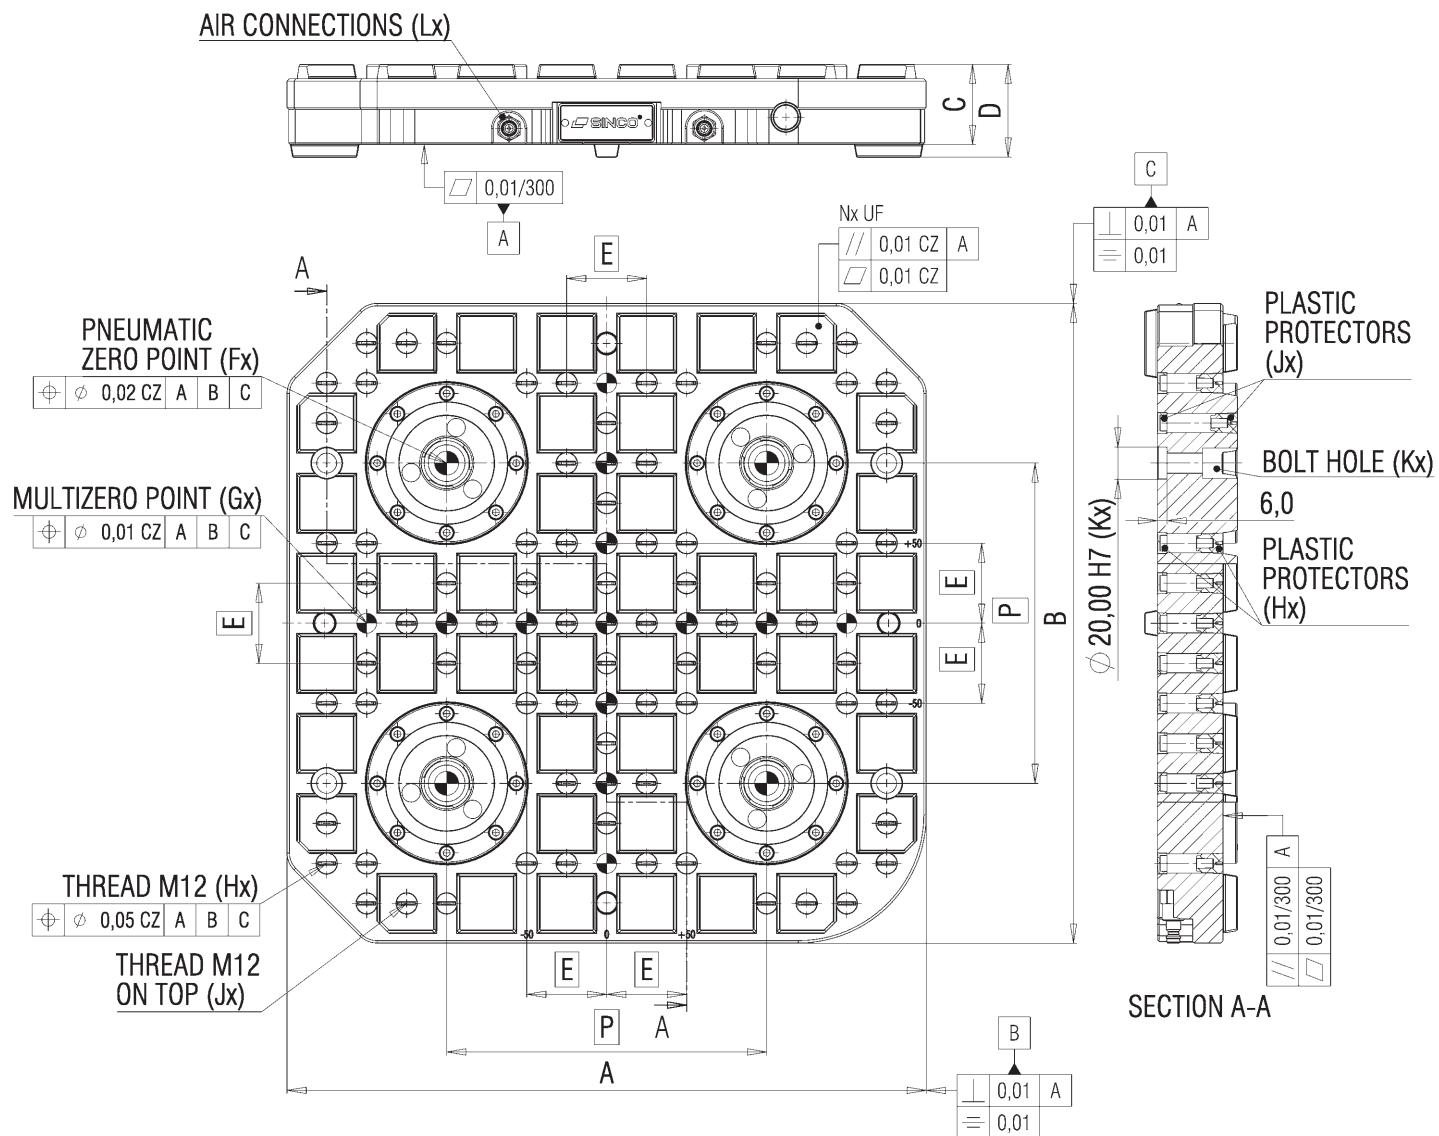

- M12 thread holes on the top used for lifting eyebolts and clamping

- Standard shut-off air connection nipple
- RFID Identification and data chip installed optionally

MultiZero® Pneumatic Pallet 200 x 400
with clamped vise

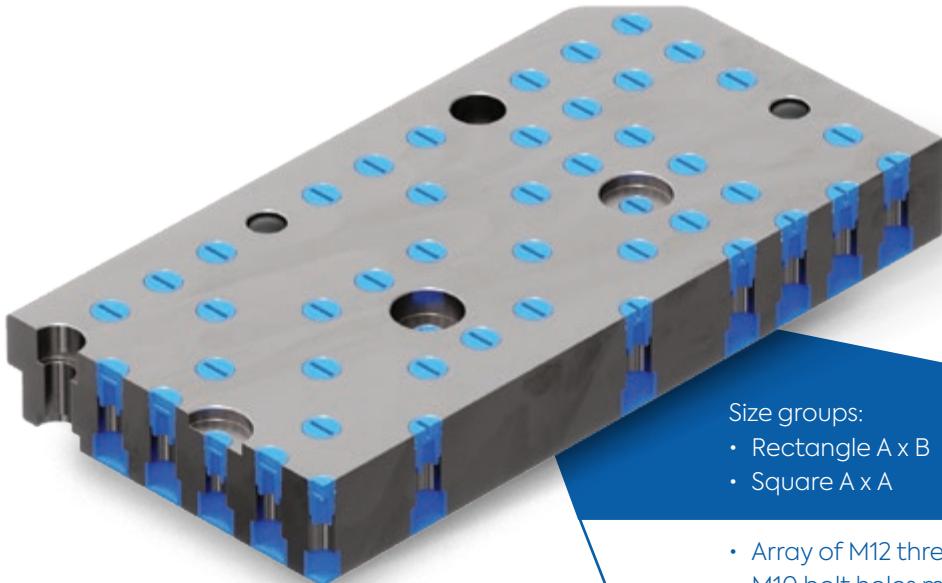

MultiZero® Pneumatic Pallet 200 x 200 with clamped
MultiZero Pallet 150 x 150

MultiZero® Clamp Pallet

Pallet features

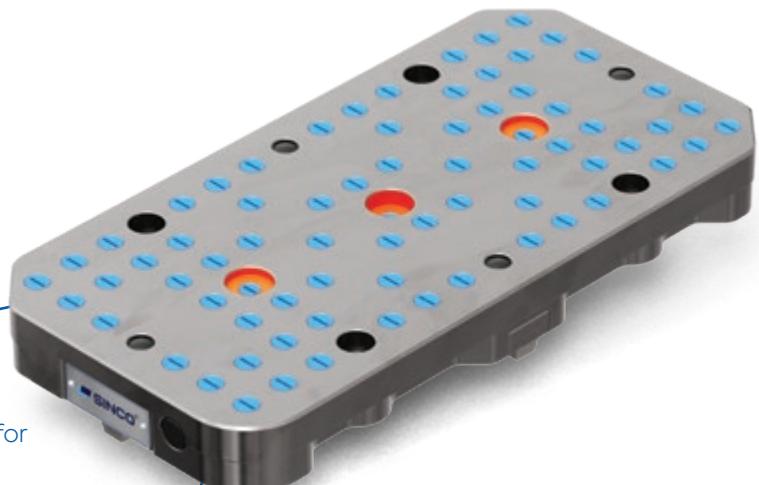

- Used for clamping various fixtures or workpieces and vises directly
- M12 thread holes in array of 25x25 mm
- Standard dowel holes D12,00 F6 at each M12 thread, support hole and dowel system
- Holes for M10 bolts made from the underside, at every M12 thread hole
- Precisely machined holes D25,00 H7 for centering vises and fixtures, on the top of pallet
- Two types of pallet clamping:
 - Clamped with M12 bolts to the MultiZero® Plate
 - Clamped with retractable nipple onto the MultiZero® Pneumatic Plate
- Pallet can be lifted by supports centered through slots from the underside at each clamping bolt
- Pallet material: corrosion-resistant steel
- RFID identification and data chip optionally on each pallet

Size groups:

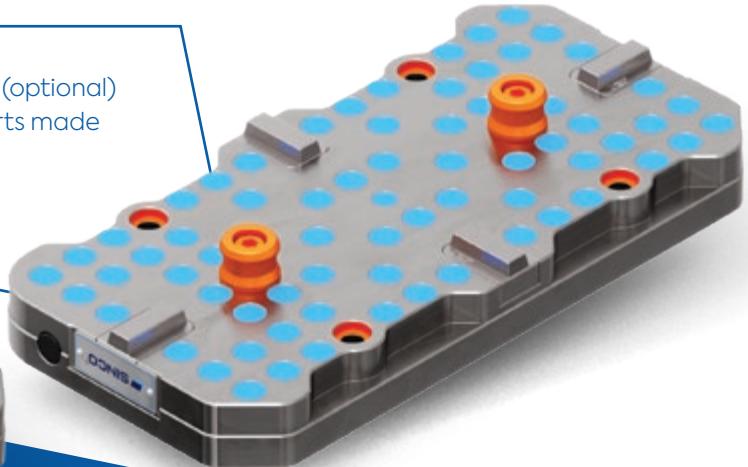

- Rectangle A x B
- Square A x A

- Array of M12 thread holes, pattern 25x25 mm
- M10 bolt holes made from the underside
- Plastic protectors for thread holes (supplied)

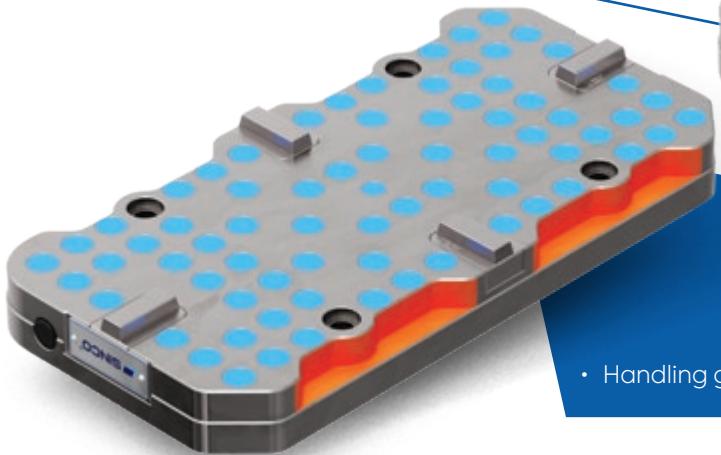

- Centering holes D25,00 on top used for centering vises and special fixtures
- Number and pattern vary on pallet size

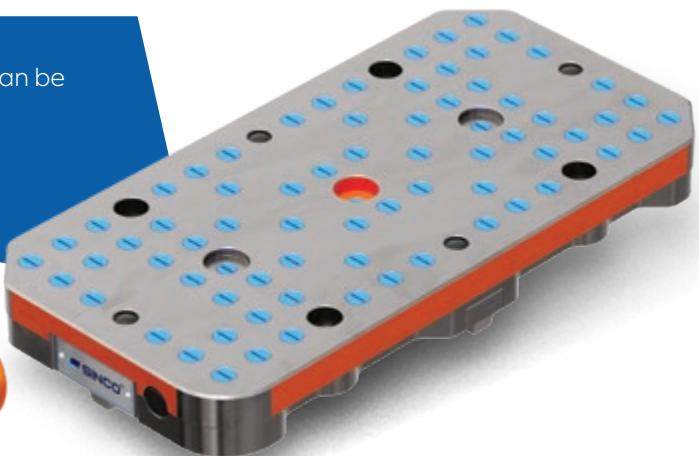

- Retractable nipples on the underside (optional)
- Positioning holes for clamping supports made underneath clamping bolts

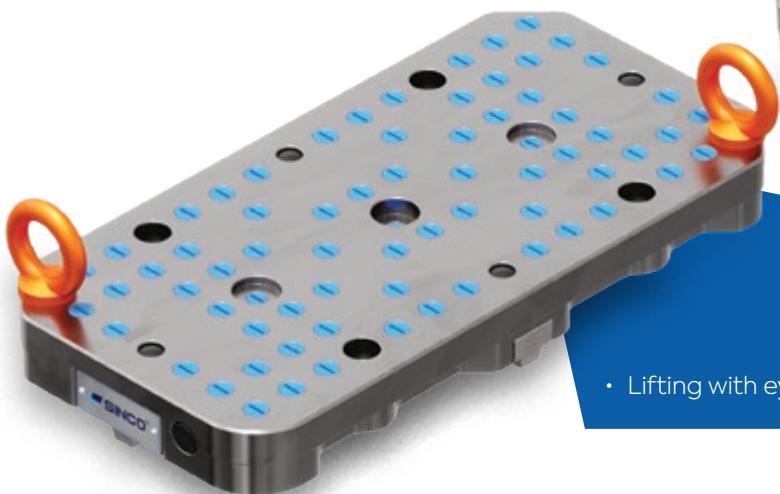

- Handling grooves on the underside

- Precise pallet sides and centering holes can be used for centering

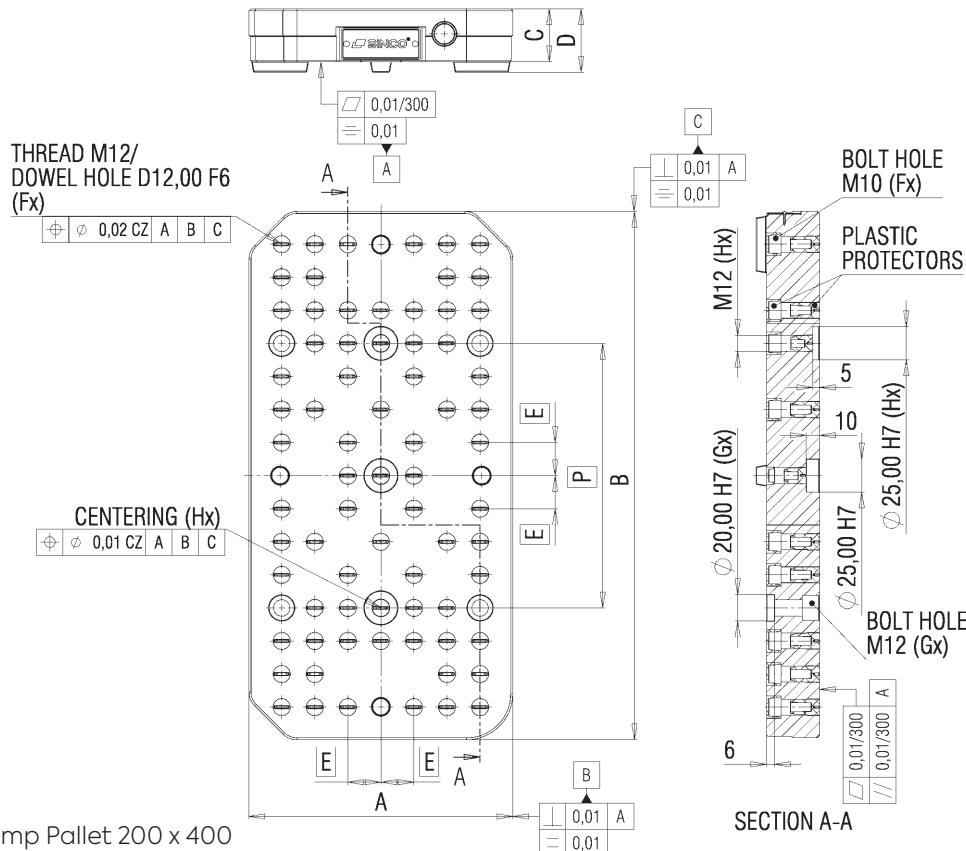

- Lifting with eyebolts

- RFID identification and data chip installed optionally

MultiZero® Clamp Pallet Examples

MultiZero® Clamp Pallet 200 x 400 with workpiece clamped with standard clamps

MultiZero® Clamp Pallet 200 x 400 with workpiece clamped from the underside

MultiZero® Clamp Pallet 200 x 500 with workpiece clamped with vise

MultiZero® Blank Pallet

Pallet features

- Delivered with blank top surface, or milled according to customer requests
- Used for specific uses:
 - clamping of special vises and clamping fixtures
 - clamping customer specific workpieces, pallets can be designed and produced according customers project requirements
 - possible to install specific zero-point pneumatic modules
- Two types of pallet clamping:
 - Clamped with M12 bolts to the MultiZero® Plate
 - Clamped with retractable nipples onto the MultiZero® Pneumatic Plate
- Pallet can be lifted by supports centered through slots from the underside at each clamping bolt

- Pallet material: corrosion-resistant steel
- RFID identification and data chip optionally installed on each pallet

Size groups:

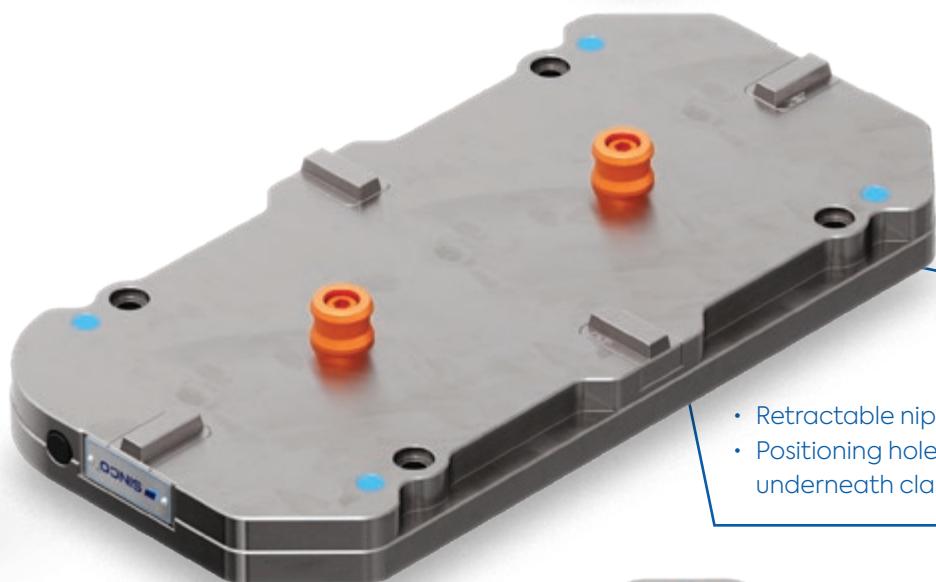

- Rectangle A x B
- Square A x A

- Plastic protectors for thread holes
- RFID identification and data chip installed optionally

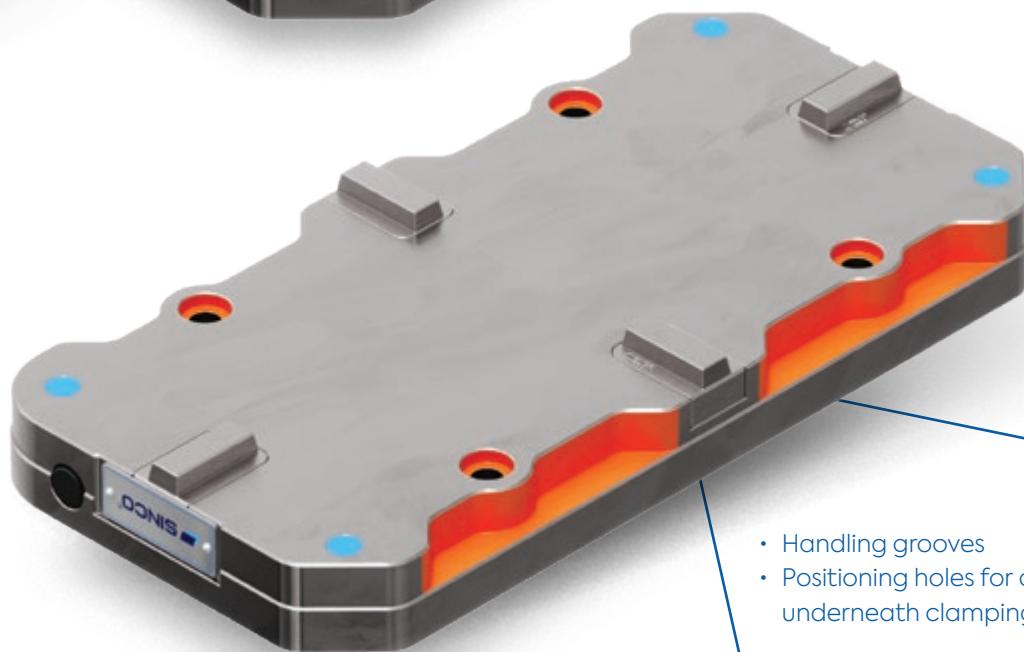

- Precise pallet sides used for centering
- M12 thread holes for lifting

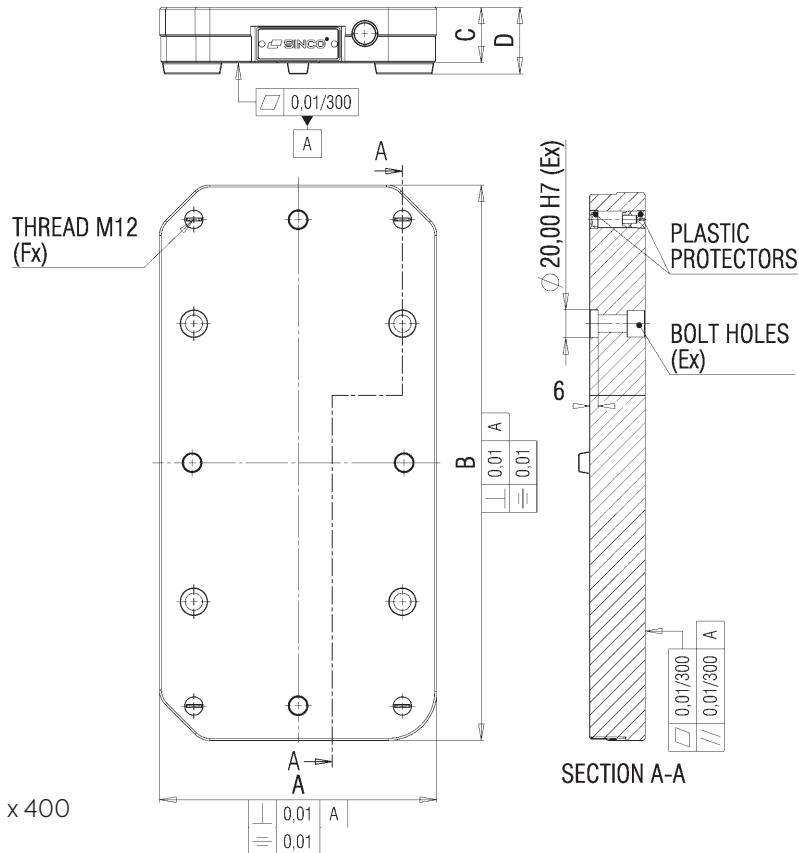

- Retractable nipples on the underside (optional)
- Positioning holes for clamping supports made underneath clamping bolts

- Handling grooves
- Positioning holes for clamping supports made underneath clamping bolts

MultiZero® Blank Pallet Rectangle Sizes A x B

MultiZero® Blank Pallet Examples

MultiZero® Blank Pallet 200 x 200 with workpiece clamped in the vise

MultiZero® EDM Pallet

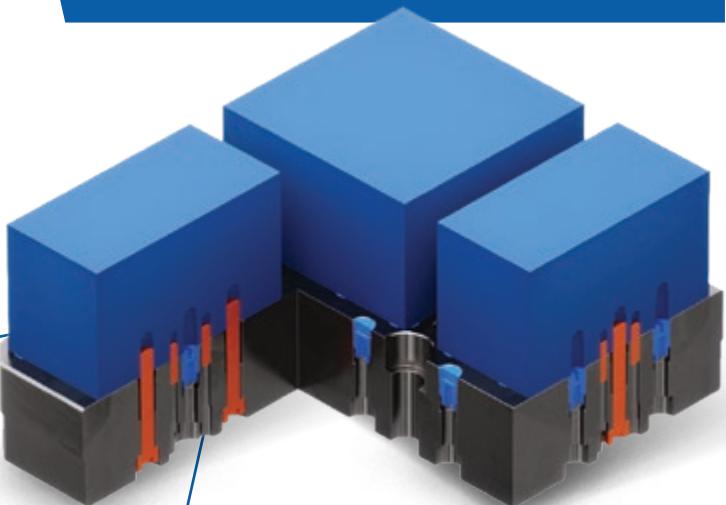

Pallet features

- Used for clamping electrodes directly onto the pallet or clamping various workpieces and fixtures
- Self-centering of the pallet and clamped electrodes on the MultiZero® Plate, no additional centering needed
- Two types of pallet clamping:
 - Clamped with one or four M12 bolts to the MultiZero® Plate
 - Clamped with retractable nipples onto the MultiZero® Pneumatic Plate
- Dowel pin positioning of electrodes, compatible with Meusburger Electrode System Hole Pattern
- Great flexibility with multiple ways to clamp electrodes:
 - Dowel pins and M6 bolt from underneath the pallet
 - Dowel pins and M8 bolt from the top
 - Fixation of larger workpieces / electrodes or fixtures with M8 bolts from underneath
 - Fixation of larger workpieces / electrodes or fixtures with M10 bolts from the top

- Pallet material: corrosion-resistant steel
- RFID identification and data chip optionally installed on each pallet

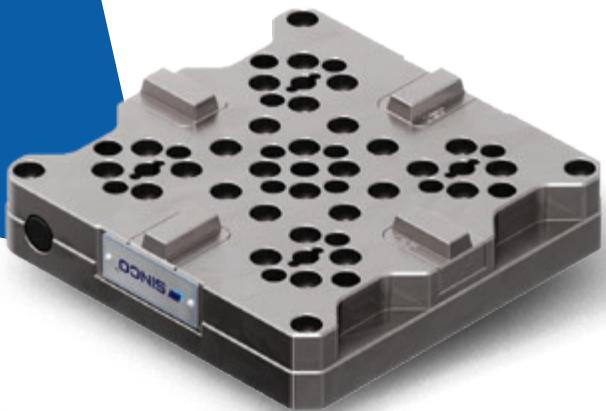

- Clamping with one or two M6 screws from the underside of the pallet
- Dowel pins D3.00 and D4.00 at

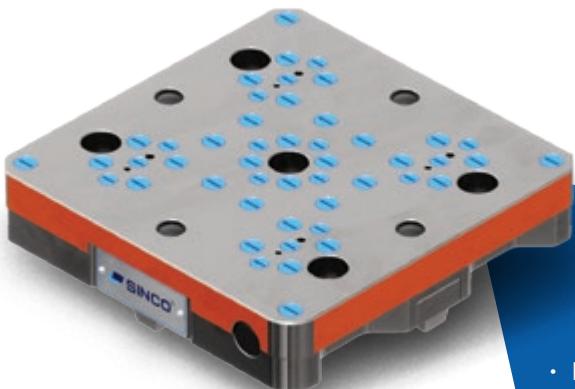

- Example of clamping four electrodes, with one and two screws M6

- Thread and bolt holes in pattern 50 x 50:
 - Bolt holes M8 from the bottom
 - Thread holes M10 from the top

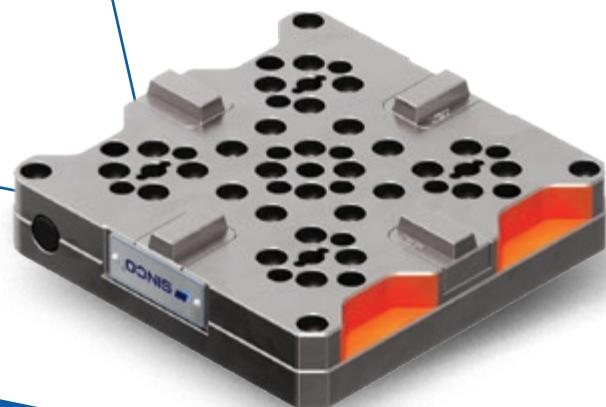

- Plastic protectors for thread holes (supplied)

- Handling grooves on the underside

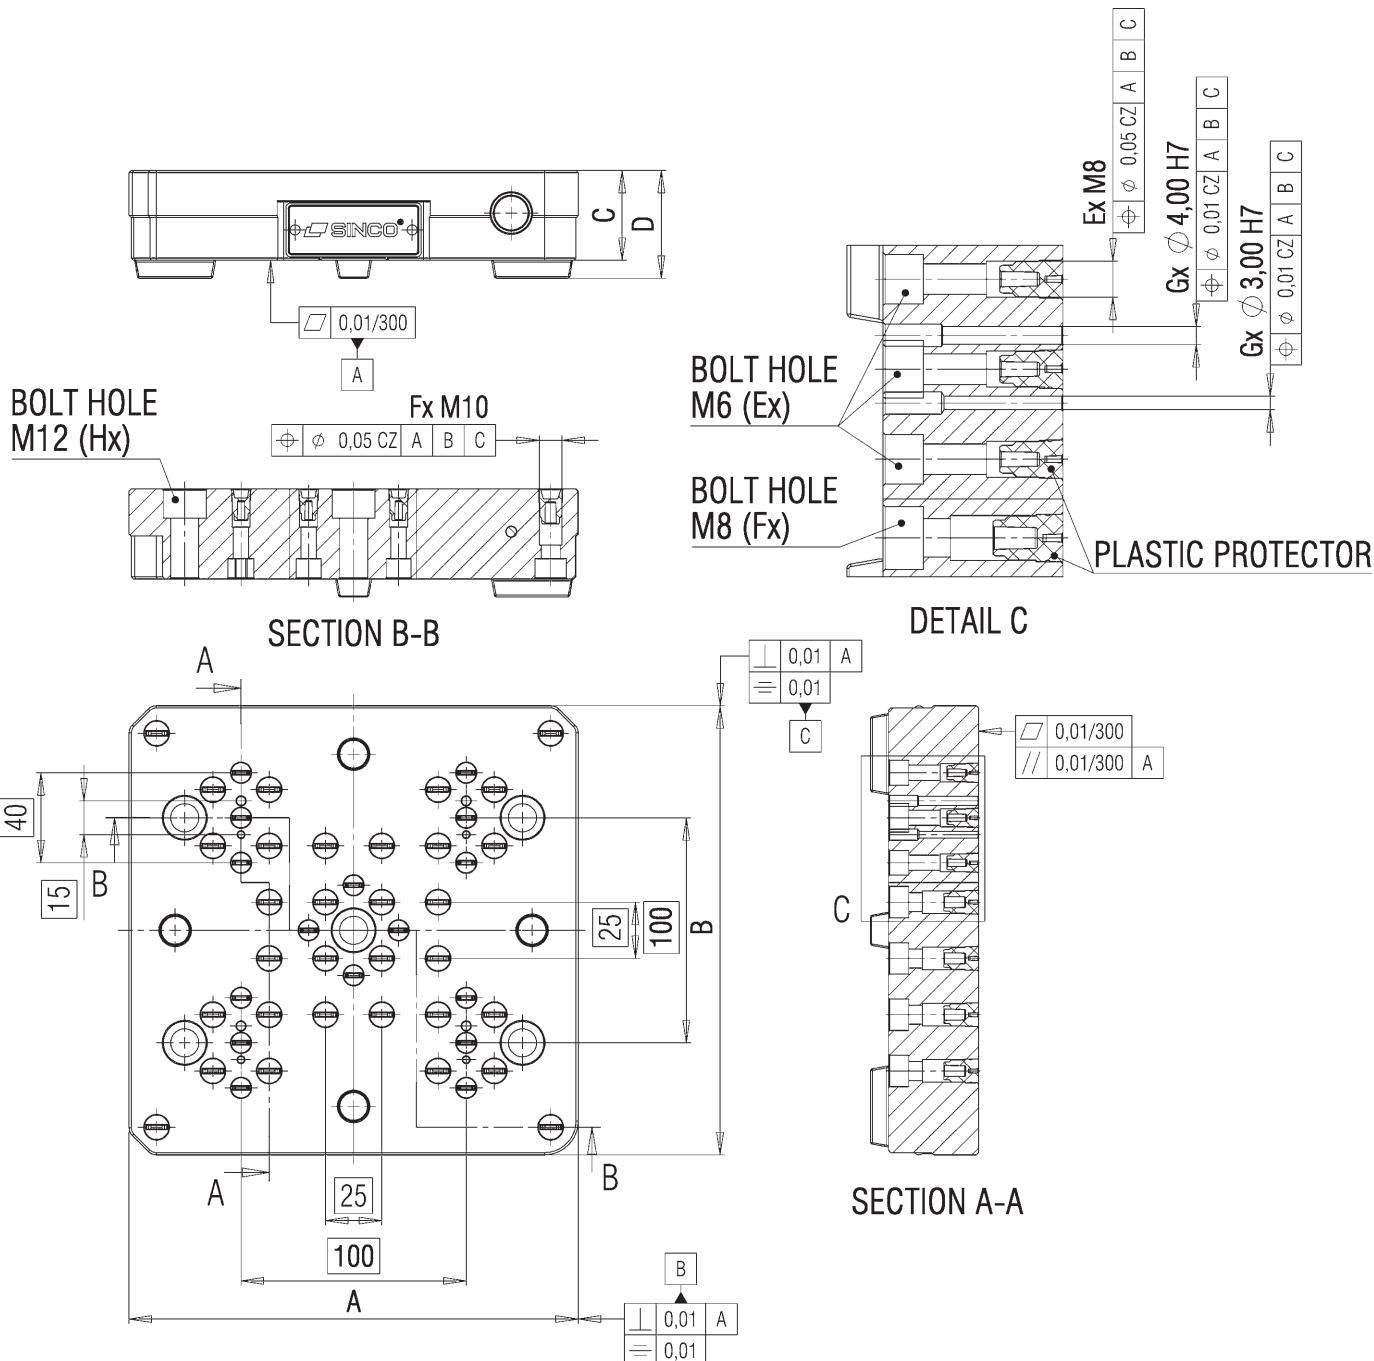

- Precise pallet sides and centering holes can be used for centering

- RFID identification and data chip installed optionally

MultiZero® EDM Pallet Sizes

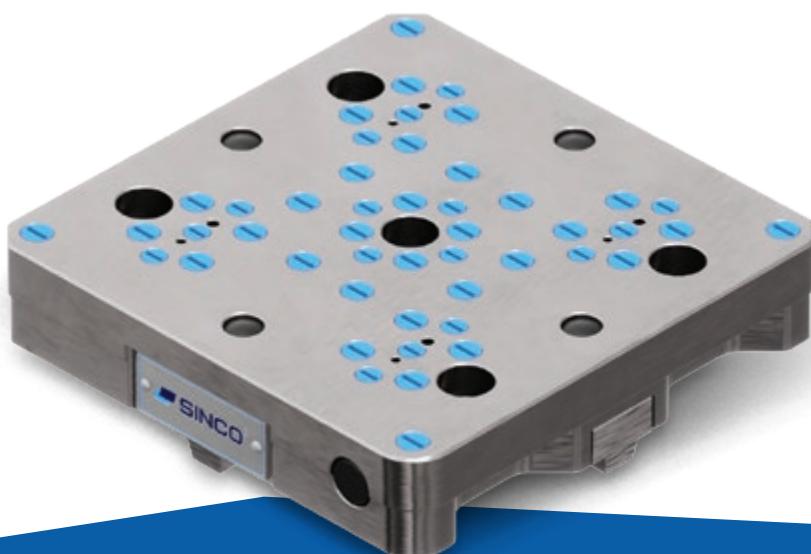

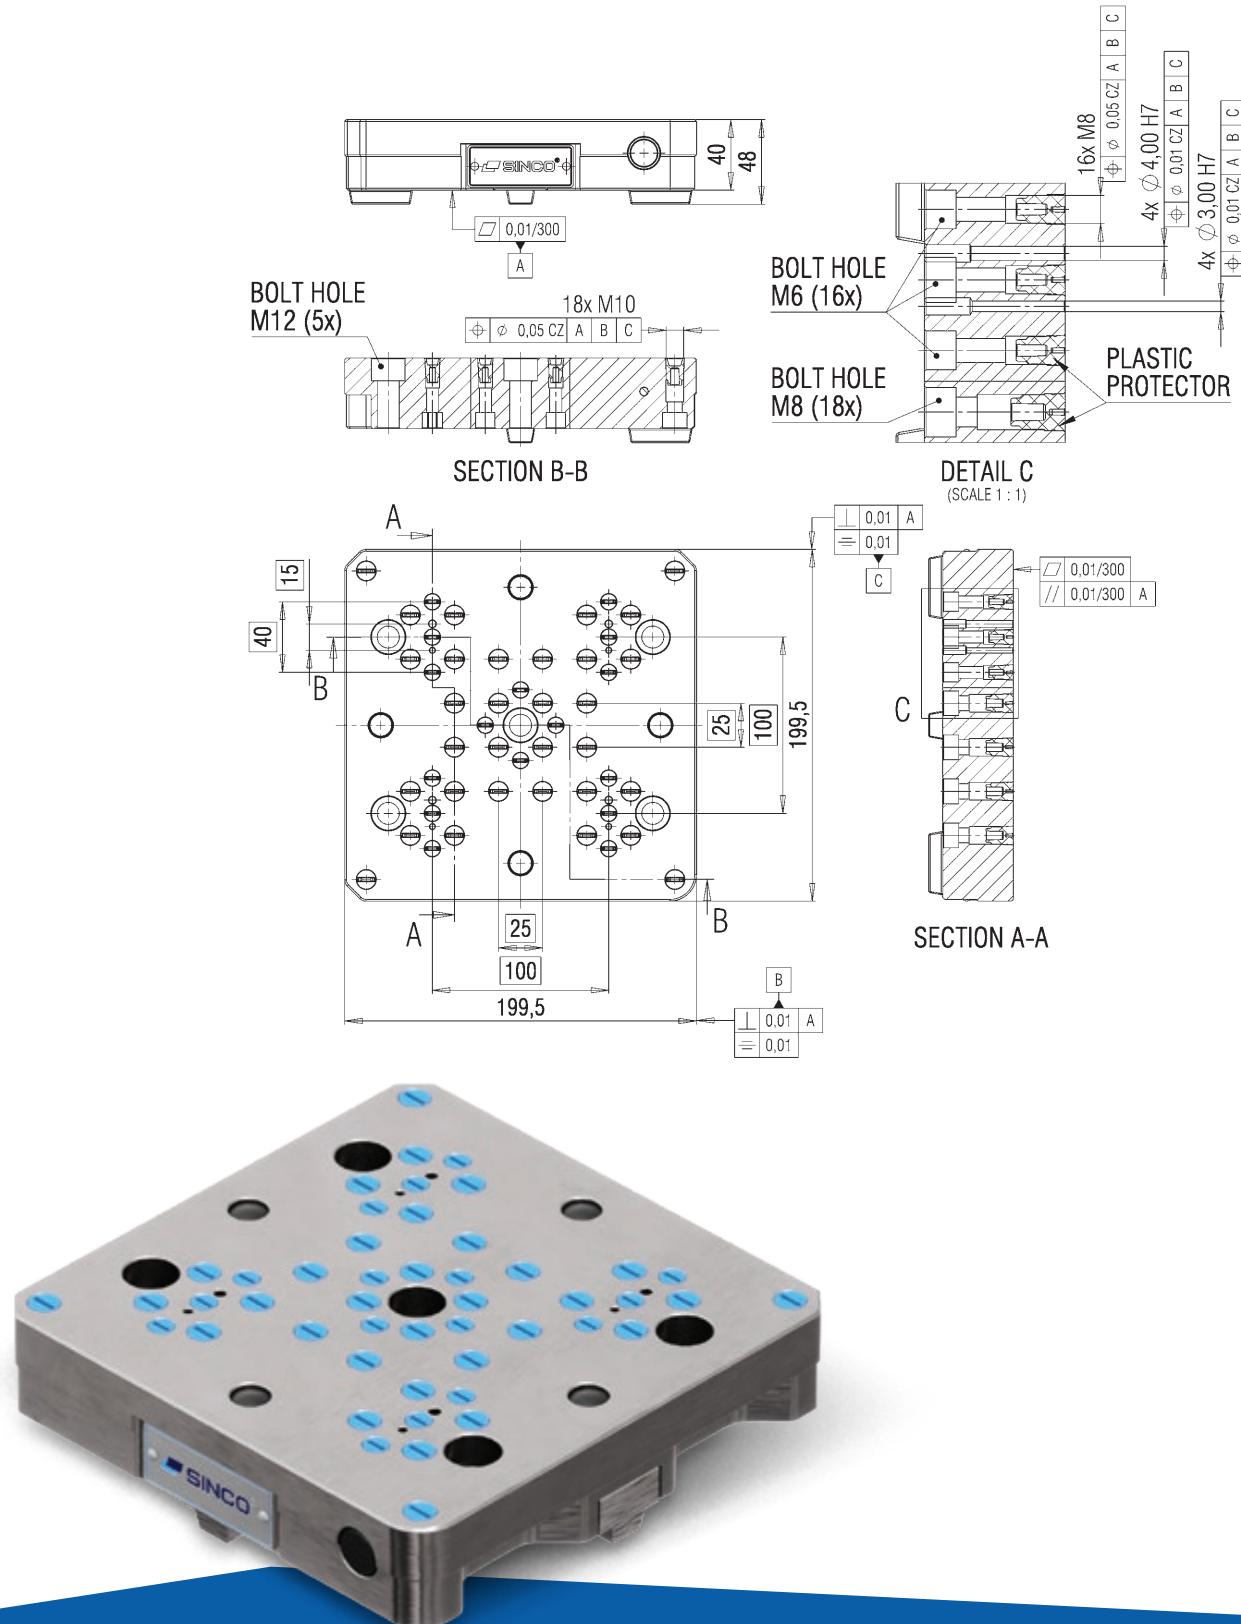

Example: MultiZero® EDM Pallet 200 x 200

Size	A (mm)	B (mm)	C (mm)	D (mm)	E*	F*	G*	H*	Weight (kg)
200 x 200	199.5	199.5	40.0	48.0	16x	18x	4x	1x / 4x	10.5
400 x 400	399.5	399.5	40.0	48.0	60x	48x	4x/8x	1x / 4x	43.5

E* - M6 bolt holes & M8 thread for clamping electrodes qty. / F* - M8 bolt holes & M10 thread for clamping electrodes qty. / G* - Electrode clamping points qty. / H* - Pallet clamping bolts (M12) qty.

MultiZero® EDM Pallet 200 x 200

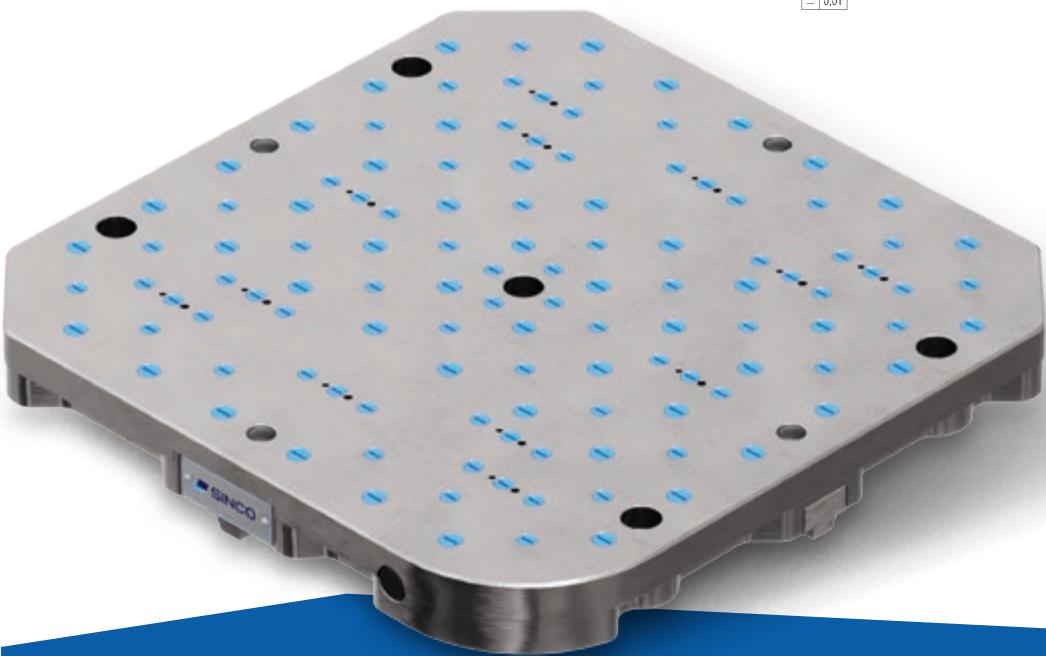

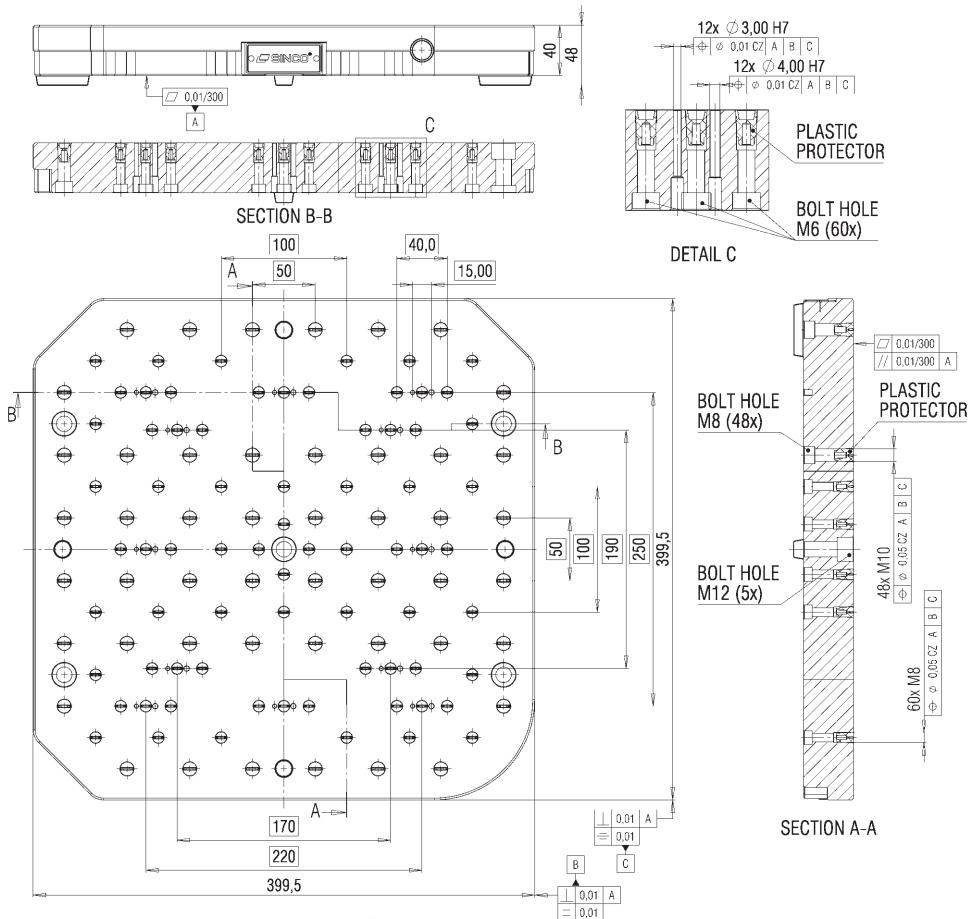

- Clamping one larger electrode: max. dimensions of the electrode: 125.0 x 195.0
- Clamping four electrodes: max. dimensions of the electrode: 85.0 x 85.0

Order No.	Dimensions (mm)	Thread holes M8	Thread holes M10	Clamping bolts	Weight
1B2-1114-0	199.5 x 199.5 x 40 (48)	16x	18x	1x/4x	10.5 kg

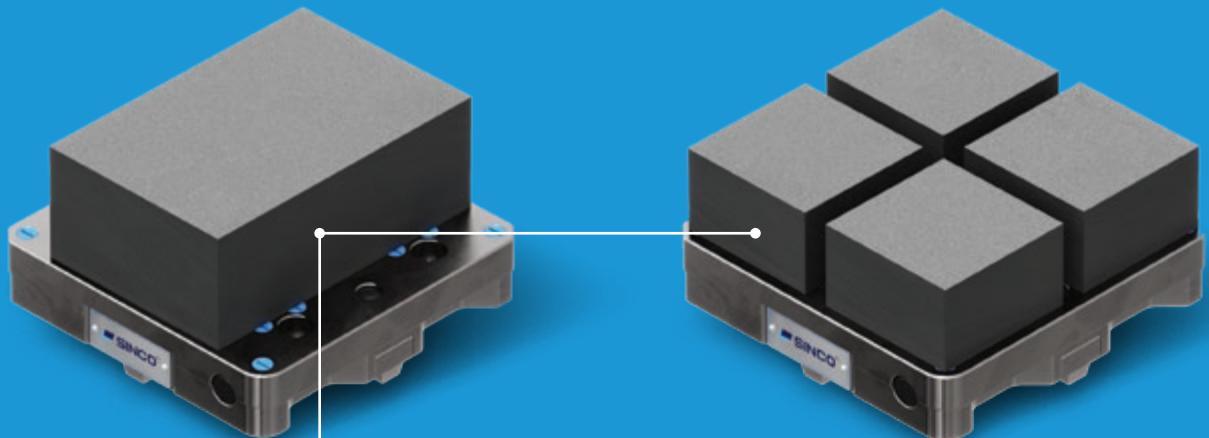

MultiZero® EDM Pallet 400 x 400

- Clamping one larger electrode: max. dimensions of the electrode: 330.0 x 365.0
- Clamping four electrodes: max. dimensions of the electrode: 160.0 x 170.0
- Clamping eight electrodes: max. dimensions of the electrode: 100.0 x 100.0

Order No.	Dimensions (mm)	Thread holes M8	Thread holes M10	Clamping bolts	Weight
1B2-1144-0	399,5 x 399,5 x 40 (48)	60x	48x	1x/4x	43,5 kg

MultZero® EDM Examples

MultiZero® EDM Pallet 200 x 200 with one and four electrodes clamped

MultiZero® EDM Pallet 400x400 with one, and four and eight electrodes clamped
